

PART 7: TREASURE

The coins, gems, jewelry and magic items that a party finds during an adventure is known as **treasure**. Wealth (coins, gems, jewelry and other items of value) is worth experience points to the player and allows the player to pay for better equipment, hire more retainers, and purchase special services (from higher level spell casters, for example). Magic items will usually give a character abilities not normally possessed and are useful on later adventures. Treasure is normally found in the lairs of monsters, but may be paid to a character by a high level NPC for performing a mission or job. Treasures are determined randomly or chosen by the DM. The DM should always determine the contents of a large treasure hoard before play in order to determine how best to hide and protect the treasure from theft, and if magic items are present, the DM may want to allow the monsters to use the items, such as a bugbear using a **sword +1**.

RANDOM TREASURES: To determine a monster's treasure at random, the DM uses the following step-by-step procedure:

1. Find the Treasure Type in the monster description. Find the same letter on the **Treasure Types** table hereafter; that line will be used to find the actual treasure.
2. Read across the Treasure Type line to find which types of treasure may be present. Each type will have a percentage and a range. If the DM rolls (on d%) a number equal to or less than the percentage given, that type of treasure is present. The DM should roll for each percentage and make a note of what types are present.
3. Roll dice (the type depends on the range given) to find the *amount* of each type of treasure (found in step 2, above) which is present.
4. If any magic items are present, the magic item subtables (page B46) must be used to find the actual types.

PLACED TREASURES: The DM may choose treasures instead of rolling for them randomly, or may choose a result if rolls give too much or too little treasure. The choices should be made carefully, since most of the experience the characters will get will be from treasure (usually $\frac{3}{4}$ or more). It will often be easier for the DM to decide how much experience to give out (considering the size and levels of experience in the party) and place the treasures to give this result. However, the monsters should be tough enough to make sure that the characters earn their treasure!

ADJUSTMENTS TO TREASURE: Treasures A through O are large, and generally only for use when large numbers or fairly difficult monsters are encountered. The lairs of most human-like monsters contain *at least* the number of creatures given as the **wilderness** "No. Appearing" (the number in parentheses). An encounter with less than a full lair should yield less treasure. On the other hand if 1-4 is the "No. Appearing", even one will have the normal amount of treasure, and no adjustment is necessary.

The DM may create Treasure Types other than the ones listed. Some other valuable items could be rugs, wall hangings, rare wines, silverware and other kitchen items, or even animal skins. The DM should give each special item a value, in gold pieces (and, if the optional **encumbrance** rules are used, an encumbrance).

To aid the DM, the average values (in gold pieces) of each treasure type are given below. These averages do *not* include the possible magic in the treasures. After rolling for treasures, the DM may refer to this list to see whether the treasure is larger or smaller than average and may then adjust the treasure as desired.
