--------------	-----------

This document merges the monster material from the B/X Basic and Expert books into one continuous reference chapter. The shared monster-entry rules are stated once, Basic and Expert entries are combined into one alphabetical sequence, and selected illustration plates from the original books are retained where they materially improve the presentation.

Explanations

Any creature that is not a player character is called a monster. Monsters may be friendly or hostile, wild or tame, ordinary beasts or fantastic creatures. The DM chooses which monsters become the allies and opponents of the players.

The monsters in this book represent the most commonly encountered examples of their kind. The DM may make monsters stronger or weaker to suit the needs of the campaign. When adjusting a monster's strength, the DM should also adjust related abilities such as Armor Class, Move, Damage, and Saves so they remain balanced with the monster's Hit Dice.

Some monster names are followed by an asterisk (*). This indicates that they can only be harmed by magic spells or special or magical weapons, and such monsters should be used with caution.

Unless otherwise noted, all non-human monsters have infravision, allowing them to detect heat up to 60' away in darkness. Hot objects appear bright, warm things appear in shades of gray, and cold things appear dark. Living creatures are visible by their body heat. Fire or other large heat sources may interfere with this sense.

Armor Class (AC): is determined in much the same way as for player characters and is based on both the toughness of a monster's skin or armor and its speed and dexterity.

Hit Dice: gives the number of eight-sided dice (d8) to be used to determine a monster's hit points, as well as any adjustments to the hit points (+ or -).

Example: To determine the hit points of a monster with 3+1 hit dice, roll 3d8 and add 1 to the total. **The DM will always use eight-sided dice to find a monster's hit points.**

"Hit dice" also gives the level of the monster and the dungeon level on which it is most commonly found. In general, a monster's level equals its number of hit dice, ignoring any pluses or minuses.

Example: A monster with 3+1 hit dice is a third level monster, and is most commonly found on the 3rd level of any dungeon.

Note: if a monster has several special powers, the DM may consider it one level greater than its hit dice. A monster's level is only a guide, and a monster could be found anywhere in a dungeon,

whatever the level. However, as a general rule, it is useful to limit monsters to 2 dungeon levels higher or lower than their hit dice. When monsters are encountered on dungeon levels less than the monsters' level, there should be fewer monsters than normal. And when monsters are met on dungeon levels greater than the monsters' level, there should be more monsters than normal.

Example: A 4th level monster might be found anywhere in dungeon levels 2 through 6, but it is not likely to be found on the 1st or 7th levels except one at a time (on the 1st level) or in large numbers (on the 7th level or below).

"Hit dice" also determine both the chances of a monster's attack being successful and the number of experience points a character will get for defeating it. The **Monster Attacks** table and the **Experience Points for Monsters** table are both arranged by the monster's hit dice.

In each monster description, an asterisk (*) after the hit dice means that the special abilities bonus should be added when the DM gives out experience points. Two asterisks (**) means that the special abilities bonus should be added twice when the DM gives experience points.

Move (Movement Rate): gives the number of feet a monster may move in one *turn*. The number in parentheses is the number of feet the monster may move in one *round* of combat. Some monsters have two movement rates. The first is the monster's normal movement rate, while the second is a special form of movement such as swimming, flying, or climbing.

Attacks: gives the number and type of attacks a monster may make in one combat round. Humanoid monsters often use weapons, while other creatures attack with claws, bites, horns, pincers, or other natural weapons.

Damage: gives the amount of damage caused by each successful attack. When a monster has multiple attacks, the damage values are listed in the same order as the attacks. Damage ranges correspond to dice rolls; for example, 3-18 means 3d6 damage.

Example: Attacks: 2 claws/1 bite; Damage: 1-4/1-4/2-12 indicates that the monster makes two claw attacks that each inflict 1d4 damage and one bite attack that inflicts 2d6 damage.

Some monsters also have special attacks, such as poison, petrification, paralysis, energy drain, or similar abilities, described below.

- **Acid:** Some monsters, such as gray oozes and ochre jellies, attack with acid. A successful hit means the acid has reached the target's skin. Acid continues to cause damage each round without further attack rolls until it is washed off with water, wine, or similar liquid. Acid can also destroy armor after prolonged contact, eventually reducing it to uselessness and leaving the wearer with Armor Class 9. A black dragon's acid breath is different. It causes damage for only one round per breath attack and is then neutralized. A successful saving throw reduces the damage by half. Armor is only destroyed if the victim is killed by the attack.
- **Charge:** A charge occurs when a creature rushes into melee combat. A charge cannot be made once opponents are already in melee range, nor can it be used in terrain that prevents running, such as forests, mountains, jungles, swamps, or broken ground. The charging creature must move at least 20' before attacking. A successful charge attack by a creature using horns, tusks, or similar natural weapons inflicts double damage. Spears and pole arms braced against a charging creature also inflict double damage on a successful hit.
- **Charm:** A character who fails a saving throw versus Spells against a charm attack becomes unable to act freely. A charmed character cannot attack or deliberately harm the charming creature and will obey simple commands if they can understand them. If the monster and character do not share a language, the charmed character will still attempt to protect the monster from harm. Charmed characters are too confused to cast spells or use magic items. The death of the charming creature usually ends the effect, though charm may also be removed by **dispel magic** or similar magic.
- **Continuous Damage:** Some special forms of damage, such as blood drain, swallowing, constriction, and similar attacks, deal damage automatically each round until the attacker is killed, driven off, or releases its victim.
- **Energy Drain:** A successful hit by certain **undead** monsters drains energy from the victim. Unlike most special attacks, there is no saving throw against energy drain. Each successful drain removes one experience level from a character or one Hit Die from a monster. The victim immediately loses all benefits of the lost level, including attack ability, saving throws, spells, and other class abilities. Energy drain cannot normally be cured, except by certain high level cleric spells.
- **Paralysis:** is less deadly than poison, but still very dangerous. A character struck by a paralyzing attack who fails a saving throw versus Paralysis becomes unable to move or act. The character remains fully aware of events around them, but cannot move, speak, cast spells, or perform any other actions until the paralysis ends. Unless otherwise stated, paralysis lasts for 2–8 (2d4) turns. A cleric's **cure light wounds** spell may remove paralysis, though it causes no healing when used this way. Attacks against a paralyzed creature automatically hit; only damage must be rolled. Paralysis has no permanent effects once it wears off.
- **Poison:** A poisoned hit is often fatal if the victim fails a save versus Poison.
- **Swallow:** Some monsters can swallow opponents whole. This attack always succeeds on a natural roll of 20, though larger creatures may require a higher number. A swallowed victim suffers the listed damage each round until either the monster or the victim dies. A swallowed creature armed with an edged weapon may attack from inside the monster, but suffers a -4 penalty on attack rolls. Being swallowed may also cause additional effects depending on the monster, such as paralysis or unconsciousness. A victim killed and left inside the creature will be completely digested after 6 turns and cannot be recovered.
- **Swoop:** Certain flying monsters can make diving attacks from above. If the monster surprises its target, a successful swoop attack inflicts double damage. Swoop attacks cannot be used against targets protected by dense forest or jungle cover. On a roll of 18+, the monster also grabs the victim and attempts to fly away. If the victim is too heavy to carry, the monster releases them and attacks normally on the following round.

- **Trample:** Some large monsters can crush opponents beneath their weight. Creatures with this attack have a 75% chance each round to trample instead of using another attack. Trample attacks gain a +4 bonus on attack rolls against man-sized or smaller creatures. The DM may also allow herds of 20 or more normal animals, such as horses, to stampede and trample. A stampeding herd inflicts 1d20 points of damage.

No. Appearing (Number Appearing): gives the suggested number of monsters encountered at one time. The first number is the typical range encountered on a dungeon level equal to the monster's Hit Dice or level.

Example: A monster with 3+1 Hit Dice and No. Appearing: 1-6 would commonly be encountered in groups of 1d6 on the 3rd dungeon level.

When monsters are encountered on dungeon levels lower than their own level, fewer should usually appear. On deeper levels, larger groups are more common. The exact numbers are left to the DM's judgment.

The number in parentheses gives the typical number encountered in the monster's lair or in the wilderness. Wilderness lairs often contain up to five times the number normally encountered in a dungeon.

A 0 means the monster is not normally encountered in that environment unless specially placed by the DM.

Save As: gives the character class and level a monster uses for saving throws. Monsters nor-

mally save as Fighters. Unintelligent monsters usually save at half their Hit Dice or monster level, rounding fractions up.

Example: An unintelligent monster with 3 Hit Dice would save as a 2nd level character. Intelligent monsters usually save at their full monster level.

Some monsters that are magical, enchanted, or possess special abilities may have improved saving throws, as noted in their descriptions.

Morale: measures a monster's willingness to continue fighting. The DM may adjust morale to reflect the situation or circumstances of the encounter. To check morale, roll 2d6. If the result is greater than the monster's morale score, the creature will usually attempt to flee, retreat, or surrender.

Treasure Type: gives the letter code used to determine the treasure associated with a monster, as described on the **Treasure Types** table. Treasure is most often found in a monster's lair rather than carried by wandering monsters, unless an individual treasure type is listed.

Unintelligent creatures rarely possess treasure, though valuables may sometimes be found among the remains of their victims or collected as shiny curiosities.

Alignment: shows whether a monster is Lawful, Neutral, or Chaotic. Unintelligent creatures are usually Neutral. The DM should play monsters according to their alignment and behavior. Only intelligent creatures can speak an alignment language.

Hit Dice	9	8	7	6	5	4	3	2	1	0	-1	-2	-3	-4	-5	-6	-7	-8

Monster Attack Matrix

An asterisk after Hit Dice matters for experience awards. (*) means the XP Bonus is added once, and (**) means it is added twice.

Hit Dice	XP Value	Bonus	XP * Value	XP ** Value
Under 1	5	1	6	7
1 to 1+	10-15	3-4	13-19	16-23
2 to 2+	20-25	5-10	25-35	30-45
3 to 3+	35-50	15-25	50-75	65-100
4 to 4+	75-125	50-75	125-200	175-275
5 to 5+	175-225	125-175	300-400	425-575
6 to 6+	275-350	225-300	500-650	725-950
7 to 7+	450-500	450-500	850-950	1,250-1,400
8 to 8+	650-750	550-600	1,200-1,350	1,750-1,950
9 to 9+	900-1,000	700-750	1,600-1,750	2,300-2,500
10 to 10+	1,250-1,300	875-950	2,125-2,250	3,000-3,200
11 to 11+	1,450-1,500	975-1,000	2,425-2,500	3,400-3,500
12 to 12+	1,650-1,750	1,050-1,075	2,700-2,825	3,750-3,900
13 to 16+	1,900-2,050	1,150-1,300	3,050-3,350	4,200-4,650
17 to 20+	2,200-2,400	1,500-1,750	3,700-4,150	5,200-5,900
21 to 21+	2,500-2,650	2,000-2,150	4,500-4,800	6,500-6,950
22 to 22+	2,750-2,900	2,250-2,400	5,000-5,300	7,250-7,700

Experience Points for Monsters

Welcome Adventures!

Animals

Animals in this section are considered “animals” for the purposes of magic such as **animal summoning** or **invisibility to animals**. These are natural creatures, though some may be unusually large, fierce, or dangerous. Some kindly DMs may permit other creatures, such as dinosaurs or giant invertebrates, to count as “animals” for such magic—but this is strictly at the DM’s option.

Baboon, Rock

Source: Basic

Armor Class	6	No. Appearing	2d6 (5d6)
Hit Dice	2	Save As	Fighter 1
Move	120' (40')	Morale	8
Attacks	club / bite	Treasure Type	U
Damage	1d6/1d3	Alignment	Neutral

Rock baboons are larger and more intelligent than normal baboons. Omnivorous and aggressive, they will eat nearly anything but strongly prefer meat. They do not make tools or weapons, though they commonly wield stones, bones, or heavy branches as crude clubs. They favor rocky hills, cliffs, and ruined places, where they hurl stones from above at intruders before closing to attack.

Rock baboons travel in fierce packs led by a dominant male. They are bad-tempered, territorial creatures known for sudden violence and savage infighting. Though incapable of true speech, they communicate through barks, shrieks, and threatening screams that convey simple warnings and commands.

Bat

Source: Basic

Stat	Normal	Giant
Armor Class	6	6
Hit Dice	1 HP	2
Move	9' (3')	30' (10')
Fly	120' (40')	180' (60')
Attacks	Confusion	1 bite
Damage	Nil	1d4
No. Appearing	1d100 (1d100)	1d10 (1d10)
Save As	Normal Man	Fighter 1
Morale	6	8
Treasure	Nil	Nil
Alignment	Neutral	Neutral

Bats are nocturnal flying mammals commonly found in caves, ruins, and abandoned buildings. They navigate by echolocation rather than sight, using high-pitched sounds and echoes to locate their surroundings.

Because bats do not rely on vision, spells or abilities that affect sight will not work on them. However, a **silence 15'** radius spell effectively blinds a bat by preventing it from using echolocation.

Normal Bats: Normal bats do not attack humans, but large groups may confuse victims by swarming around their heads. At least ten bats are required to affect one character. Confused characters suffer a -2 penalty on attack rolls and saving throws and cannot cast spells.

Giant Bats: Giant bats are carnivorous and may attack adventurers if hungry.

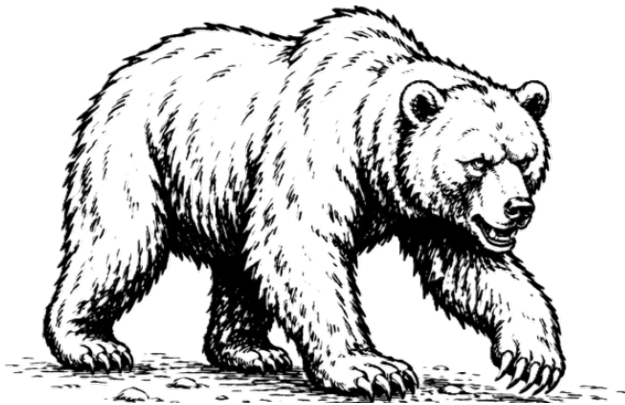

Vampire Bats: 5% of giant bat encounters are actually giant vampire bats. Their bite causes no extra damage, but the victim must save versus Paralysis or fall unconscious for 1d10 rounds. A vampire bat then drains 1d4 hit points of blood each round. Any creature slain in this way must save versus Spells or rise as a vampire 24 hours later.

Bear

Source: Basic

Stat	Black	Grizzly	Polar	Dire
Armor Class	6	6	6	6
Hit Dice	4	5	6	6+2
Move	120' (40')	120' (40')	120' (40')	120' (40')
Attacks	2 claws / 1 bite	2 claws / 1 bite	2 claws / 1 bite	2 claws / 1 bite
Damage	1d3x2 / 1d6	1d4x2 / 1d8	1d6x2 / 1d10	1d8x2 / 1d10
No. Appearing	1d4 (1d4)	1d4 (1d4)	1 (1d2)	1d2 (1d2)
Save As	Fighter 2	Fighter 2	Fighter 3	Fighters 3
Morale	7	8	8	9
Treasure Type	U	U	U	U
Alignment	Neutral	Neutral	Neutral	Neutral

Bears are well known to all adventurers. If a bear (of any type) hits with both paws on the same victim in one round of combat, the bear has hugged its victim and will cause 2d8 additional points of damage in the same round as the attack.

Black bear: have black fur and stand about 6' tall. They are omnivorous (will eat almost anything), but prefer roots and berries. A black bear will not usually attack unless it is cornered and cannot escape. Adult black bears will fight to the death to protect their young. They have been known to raid camps, seeking food. They are especially fond of such treats as fresh fish and sweets.

Grizzly bear: have silver-tipped brown or reddish brown fur, and stand about 9' tall. They are fond of meat and are much more likely to attack than black bears. Grizzlies are found in most climates, but are most common in mountains and forests.

Polar bear: have white fur and stand about 11' tall. They live in cold regions. They usually eat fish, but are as likely to attack as grizzly bears. These huge bears are good swimmers, and their wide feet allow them to run across snow without sinking.

Dire bear: are massive, broad-shouldered predators found in deep forests, remote mountains, and other untamed wilderness. Standing nearly 14' tall when rearing, they are larger and more aggressive than grizzlies, with thick dark fur, huge claws, and a savage temper. Dire bears are relentless hunters and will pursue wounded prey for hours. Unlike most bears, they often attack humans on sight and are feared even by giants and other large predators.

Boar

Source: Basic

Armor Class	7	No. Appearing	1d6 (1d6)
Hit Dice	3	Save As	Fighter 2
Move	150' (50')	Morale	9
Attacks	1 tusk	Treasure Type	Nil
Damage	2d4	Alignment	Neutral

Wild boars generally prefer forested areas, but can be found nearly everywhere. They are omnivorous, eating roots, carrion, insects, and almost anything else they can find. Though normally shy of humans, boars have extremely nasty tempers when disturbed or cornered and will charge with little warning. Hunters and travelers alike fear their savage tusks and relentless fury once enraged.

Camel

Source: Expert

Armor Class	7	No. Appearing	0 (2d8)
Hit Dice	2	Save As	Fighter 1
Move	150' (50')	Morale	7
Attacks	bite/hoof	Treasure Type	Nil
Damage	1 / 1d4	Alignment	Neutral

Camels are ill-tempered beasts, prone to biting and kicking any creature that gets in their way, including their masters. They often kick with one leg. They are used as pack and riding animals in deserts and barren lands, treating these as clear terrain. A camel may carry up to 3000 coins of weight and still move at normal speed, but the maximum load that can be carried is 6000 coins. A well-watered camel may travel

for 2 weeks without drinking. Charge attacks with a lance from camelback are **not** possible.

Cat, Great

Source: Basic

Stat	Mountain Lion	Panther	Lion	Jaguar	Tiger
Armor Class	6	4	6	5	6
Hit Dice	3 + 2	4	5	5	6
Move	150' (50')	210' (70')	150' (50')	150' (50')	150' (50')
Attacks	2 claws/bite	2 claws/bite	2 claws/bite	2 claws/bite	2 claws/bite
Damage	1d3/1d3/1d6	1d4/1d4/1d8	1d4/1d4/1d10	1d6/1d6/1d10	1d6/1d6/2d6
No. Appearing	1d4 (1d4)	1d2 (1d6)	1d4 (1d8)	1d2 (1d4)	1 (1d3)
Save As	Fighter: 2	Fighter: 2	Fighter: 3	Fighter: 3	Fighter: 3
Morale	8	8	9	9	9
Treasure Type	U	U	U	U	U
Alignment	Neutral	Neutral	Neutral	Neutral	Neutral

The Great Cats are normally cautious and avoid fights unless driven by extreme hunger or trapped with no escape route. Though they may appear relaxed or even playful, they are prone to sudden violent changes of temper. Many develop a preference for certain prey and may deliberately hunt it, sometimes including humans or human-like creatures. Great Cats rarely venture deep into caves, preferring to remain close to open wilderness. Despite their caution, they are intensely curious and may follow adventurers simply to observe them. They will always pursue fleeing prey.

Mountain Lion: These tawny-furred cats inhabit mountains, forests, and deserts. They wander farther into caves and ruins than most other Great Cats.

Panther: Panthers are found in forests, plains, and shrub lands. They are exceptionally fast and can outrun most prey over short distances.

Lion: Lions inhabit warm climates, especially savannahs and brush lands near deserts. They commonly hunt in groups known as prides.

Jaguar: Jaguars inhabit dense jungles, swamps, and overgrown ruins. Powerful swimmers and skilled climbers, they prefer ambush attacks from trees or thick vegetation. Unlike most Great Cats, jaguars readily enter water and sometimes drag prey into rivers or marshes to drown it.

Tiger: Tigers are the largest commonly encountered Great Cats. They prefer cool forests and wooded lands where their striped coats provide natural camouflage. Tigers surprise prey on a roll of 1-4 on 1d6 when hunting in wooded terrain.

Crab, Giant*Source:* Expert

Armor Class	2	No. Appearing	1d2 (1d6)
Hit Dice	3	Save As	Fighter 2
Move	60' (20')	Morale	7
Attacks	2 pincers	Treasure Type	Nil
Damage	2d6/2d6	Alignment	Neutral

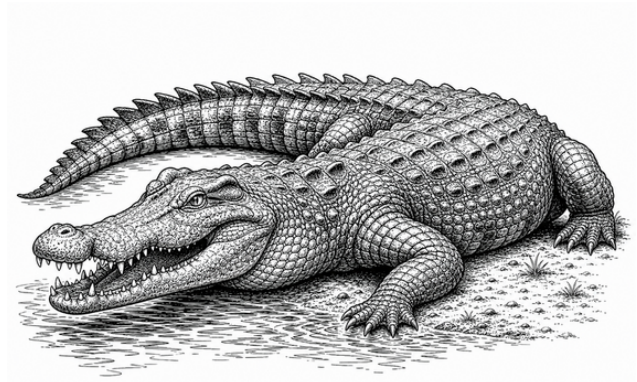

Unable to swim, giant crabs are found on the bottom of shallow waters, in coastal rivers and on beaches, and in salt or fresh water. They are always hungry and will attack anything that moves. Giant crabs are not intelligent.

Crocodile*Source:* Expert

Stat	Crocodile	Large Crocodile	Giant Crocodile
Armor Class	5	3	1
Hit Dice	2	6	15
Move	90' (30')	90' (30')	90' (30')
Swimming	90' (30')	90' (30')	90' (30')
Attacks	bite	bite	bite
Damage	1d8	2d8	3d6
No. Appearing	0 (1d8)	0 (1d4)	0 (1d3)
Save As	Fighter: 1	Fighter: 3	Fighter: 8
Morale	7	7	9
Treasure Type	Nil	Nil	Nil
Alignment	Neutral	Neutral	Neutral

Crocodiles are commonly found in tropical and semi-tropical swamps or in slow-moving rivers. Awkward on land, they do not stray far from water and will spend hours floating barely under the surface. If hungry, crocodiles will attack creatures in the water. They are particularly attracted to the smell of blood or violent thrashing of the water.

Large crocodiles are at least 20' long, and can overturn canoes and small rafts. Giant crocodiles are normally found only in "lost worlds" where prehistoric creatures thrive. They are over 50' long and have been known to attack small boats or ships.

**Elephant***Source:* Expert

Armor Class	5	No. Appearing	0 (1d20)
Hit Dice	9	Save As	Fighter: 5
Move	120' (40')	Morale	8
Attacks	2 tusks or trample	Treasure Type	See below
Damage	2d4/2d4 or 4d8	Alignment	Neutral

Any number of elephants from a lone rogue to an entire herd may be encountered. Both males and females have tusks.

In combat, elephants will first charge, striking with their tusks for double damage. In succeeding combat rounds, they will either strike with their tusks, 25%, or trample, 75%. If the opponent is man-sized or smaller, the elephant receives a bonus of +4 on "to hit" rolls when trampling.

Elephants dwell at the edge of sub-tropical forest areas. Their tusks are valued for the ivory and may be sold for 100-600 gp each.

Ferret, Giant*Source:* Basic

Armor Class	5	No. Appearing	1d8 (1d12)
Hit Dice	1 + 1	Save As	Fighter 1
Move	150' (50')	Morale	8
Attacks	1 bit	Treasure Type	Nil
Damage	1d8	Alignment	Neutral

Giant ferrets look like 3' long weasels. They hunt giant rats underground, and are sometimes trained for this purpose. Unfortunately, their tempers are highly unpredictable, and they have been known to attack their trainers and other humans.

Fish, Giant*Source:* Expert

Stat	Giant Piranha	Giant Rockfish	Giant Catfish	Giant Sturgeon
Armor Class	6	7	4	0
Hit Dice	3 + 3	5 + 5	8 + 3*	10 + 2*
Move (swimming)	150' (50')	180' (60')	90' (30')	180' (60')
Attacks	1 bite	4 spines + poison	1 bite / 4 feelers	1 bite
Damage	1d8	(1-4) x 4 + poison	2-16 / (1-4) x 4	2-20
No. Appearing	0 (2d4)	0 (2-8)	0 (1-2)	0 (1)
Save As	Fighter 2	Fighter 3	Fighter 4	Fighter 5
Morale	7	8	8	9
Treasure Type	Nil	Nil	Nil	Nil
Alignment	Neutral	Neutral	Neutral	Neutral

Giant piranha are 5' in length with green and black scales. They attack anything that disturbs the water near them. Up to 8 giant piranha can attack the same target. Once blood is drawn they go into a feeding frenzy and will not check morale. Piranha inhabit warm fresh waters and prefer rivers to lakes.

Spiny rockfish are found in shallow salt water and are very difficult to distinguish from normal boulders. There is a 70% chance that one will be mistaken for a boulder or lump of coral. A rockfish is normally harmless, but will viciously attack anyone who disturbs it. Its body is covered with spines, and it may lash 4 of them at any character. These spines do 1-4 points of damage each and are deadly poisonous, save vs. Poison or die. Mistaking a rockfish for a rock or lump of coral and grasping it will result in 4 automatic hits, each requiring a save vs. Poison in addition to the normal damage taken.

Giant catfish are chalky white fish about 15' long. They have two long feelers that sprout from each side of the mouth, and lurk in the cool muck of river and lake bottoms attacking swimmers or things moving on the bottom.

Giant sturgeon are almost 30' long and are covered with thick armorlike scales. Sturgeons are vicious fighters. On a roll of 18 or better they swallow their prey whole.

Any character swallowed takes 2d6 points of damage per round and must make a saving throw vs. Death Ray or be paralyzed. If the character saves, he or she may try to hack a way out at a penalty of -4; the inside of a sturgeon has a base AC of 7.

Hawk

Source: Expert

Stat	Normal Hawk	Giant Hawk
Armor Class	8	6
Hit Dice	1/2 (1d4 hp)	3 + 3
Move	Fly 480' (160')	Fly 450' (150')
Attacks	1	1
Damage	1d2	1d6
No. Appearing	0 (1d6)	0 (1d3)
Save As	Normal Man	Fighter 2
Morale	7	8
Treasure Type	Nil	Nil
Alignment	Neutral	Neutral

Hawks are hunting birds that glide on the updrafts of the wind, watching the ground for prey. If a hawk surprises its victim, it does double damage on its first attack.

Normal hawks do not usually attack human-sized or larger creatures unless the target appears unable to defend itself. Giant hawks are as large as a very big dog or small pony, are much stronger, and will attack human-sized creatures if hungry. Both normal and giant hawks may be

trained as pets or guards by an animal trainer.

Herd Animals

Source: Expert

Armor Class	7	No. Appearing	0 (3d10)
Hit Dice	1-4	Save As	Fighter 1-2
Move	240' (80')	Morale	5
Attacks	1 butt	Treasure Type	Nil
Damage	1d4-1d8	Alignment	Neutral

This category includes most wild, grazing creatures such as antelope, deer, wild oxen, moose, elk, goats, and caribou. At least one species will be encountered in any given climate. The number of hit dice the creature has and the amount of damage it does depends on its size. Deer, antelope, and goats typically have 1 or 2 hit dice; caribou and oxen have 3 hit dice, while elk and moose may have up to 4. Only males have a butt attack.

If more than 2 creatures are encountered, there will be 1 male per 4 creatures, with the remainder being females and young. The young will have 1/2 the hit points normal, but the males will have 1-4 extra hit points. Females and young will flee from trouble while the male protects them.

Horse

Source: Expert

Stat	Riding Horse	War Horse	Draft Horse
Armor Class	1	7	7
Hit Dice	2	3	3
Move	240' (80')	120' (40')	90' (30')
Attacks	2 hooves	2 hooves	Nil
Damage	1d4 / 1d4	1d6 / 1d6	Nil
No. Appearing	0 (10d10)	0 (domestic only)	0 (domestic only)
Save As	Fighter 1	Fighter 2	Fighter 2
Morale	7	9	6
Treasure Type	Nil	Nil	Nil
Alignment	Neutral	Neutral	Neutral

Riding horses are smaller than draft or war horses but can carry a rider farther. A riding horse is noted for its ability to exist anywhere there is grass to feed on. Any wild horse can become a riding horse if tamed. The amount of weight the horse can carry and still move at normal speed is 3000 cn. The maximum weight that can be carried is 6000 cn at half movement.

War horses are bred for warlike temperament and strength. They cannot be ridden long distances at high speed, but are powerful in a short charge. A war horse can carry 4000 cn at full speed and 8000 cn at half speed. When charging, a rider employing a lance will do double damage if a hit is successful, although the horse may not fight at the same time. After the first charging round, both rider and horse can fight normally.

Draft horses are large horses bred for sturdiness and endurance. They are used primarily for plowing, pulling wagons, and as pack animals. A draft horse can carry a normal load of 4500 cn and a maximum load, movement reduced by 1/2,

of 9000 cn. A draft horse will not fight; if attacked, it will attempt to flee.

Leech, Giant

Source: Expert

Armor Class	7	No. Appearing	0 (1d4)
Hit Dice	6	Save As	Fighter 3
Move	90' (30')	Morale	10
Attacks	Blood suck	Treasure Type	Nil
Damage	1d6	Alignment	Neutral

Giant leeches are loathsome and slug-like. They live in swamps and are about 3 to 4 feet long. A giant leech has a sucker-like mouth that attaches to the victim if a hit is successful. It then sucks blood, doing 1-6 points of damage per round. A giant leech must be killed to be removed from its victim. When the victim dies, the leech will drop off and hide while it digests its meal.

Lizards, Giant

Source: Basic

Stat	Gecko	Draco	Horned Chameleon	Tuatara
Armor Class	5	5	2	4
Hit Dice	3 + 1	4 + 2	5*	6

Save As	Fighter 2	Fighter 3	Fighter 3	Fighter 4
Morale	7	7	7	6
Treasure Type	U	U	U	V
Alignment	Neutral	Neutral	Neutral	Neutral

Gecko: A gecko is a 5' long lizard colored pale blue with orange-brown spots. Geckos are carnivorous and nocturnal, sleeping during the day and active at night or in darkness. Geckos hunt by climbing steep walls or trees with their specially adapted feet, then dropping on their prey to attack.

Draco: A draco is a 6' long lizard with wide flaps of skin between its legs which it can spread to glide through the air like a flying squirrel. Dracos are generally found above ground, though they sometimes creep into caves to escape very cold or very hot weather. Dracos are carnivorous and have been known to attack humans.

Horned Chameleon: A horned chameleon is a 7' long lizard which can change color to blend into its surroundings. It surprises on a roll of 1-5 on 1d6. A horned chameleon can shoot out its sticky tongue up to 5' long. A successful hit means that the victim is pulled to the horned chameleon's mouth and automatically bitten for 2d4 points of damage. The horned chameleon can also attack with its horn for 1d6, and may use its tail to knock other attackers down on a successful hit, doing no damage but preventing the victim from attacking that round.

Tuatara: A tuatara is a 8' long lizard that looks like a cross between an iguana and a toad. It has pebble-colored olive skin with white spikes along its back. It is carnivorous and sometimes attacks humans. A tuatara has a membrane over its eyes which, when lowered, is sensitive to changes in temperature, allowing it to see in darkness with 90' infravision.

Figure 1: Basic monster illustration: giant lizards

Mule

Source: Basic

Armor Class	7	No. Appearing	1d8 (2d6)
Hit Dice	2	Save As	Normal Man
Move	120' (40')	Morale	8
Attacks	1 kick or 1 bite	Treasure Type	Nil
Damage	1d4 or 1d3	Alignment	Neutral

A mule is a crossbreed between a horse and a donkey. Mules are stubborn, and if bothered or excited they may either bite or kick. If the DM permits it, mules can be taken into dungeons. A mule can carry a normal load of 2000 coins (or 4000 coins at most, with its move reduced to 60'/turn). Mules cannot be trained to attack, but will fight in their own defense.

Octopus, Giant

Source: Expert

Armor Class	7	No. Appearing	0 (1d2)
Hit Dice	8	Save As	Fighter 4
Move	90' (30')	Morale	7
Attacks	8 tentacles/1 bite	Treasure Type	Nil
Damage	1d3 (x8) / 1d6	Alignment	Neutral

Giant octopi lurk in the waters near fishing villages and other coastal areas in tropical or temperate climates.

In combat, a giant octopus will squeeze with its tentacles and stab or bite any creature dragged to its mouth with its fearsome beak.

Once a tentacle hits in combat, it will constrict and automatically do 1-3 points of damage each round. Each tentacle that hits also reduces its victim's chance to hit by 1 (a man with all of an octopus's tentacles wrapped around him would have a penalty of -8 on his "to hit" rolls). A character may try to sever a tentacle and will succeed when any single hit with an edged weapon does 6 or more points of damage.

If a combat is going against it, a giant octopus will flee, jetting away at triple speed and trailing a large, black cloud of ink (40' radius).

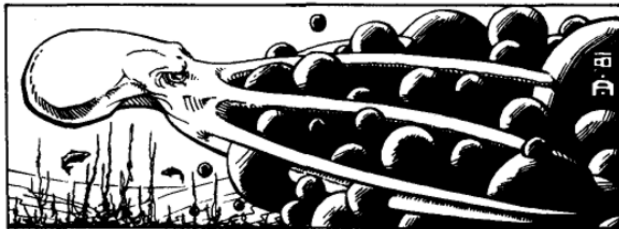

Figure 2: Expert monster plate: octopus

Rat

Source: Basic

Stat	Normal	Giant
Armor Class	9	7
Hit Dice	1 hit point	1d4 hit points
Move	60' (20')	120' (40')
Swimming	30' (10')	60' (20')
Attacks	1 bite per pack	1 bite each
Damage	1d6 + disease	1-3 + disease
No. Appearing	5d10 (2d10)	3d6 (3d10)
Save As	Normal Man	Fighter 1
Morale	5	8
Treasure Type	L	C
Alignment	Neutral	Neutral

Rats will eat almost anything and some rats carry diseases. Anyone bitten by a rat has a 1 in 20 chance of being infected, and that chance should be checked each time a rat successfully hits. The victim may still avoid the disease by making a saving throw vs. Poison. If the save is failed, roll 1d4. On a 1 the victim dies in 1-6 days; otherwise the victim is sick in bed and unable to adventure for one month. The disease may be cured magically.

Rats usually avoid humans and will not attack unless summoned, by a wererat for example, or while defending their lair. Rats are good swimmers and may attack without penalty while in water. They are afraid of fire, and will run from it

unless forced to fight by their leader, the creature summoning them.

Normal Rats: Normal rats may be from 6 inches to 2 feet long and have gray or brown fur. They attack in packs of 5 to 10. If there are more than 10 rats they will attack several creatures as packs of 10 or less. A pack will only attack one creature at a time, but may bite for 1-6 points of damage, plus the normal chance of disease checked once per pack attack. Rats will climb all over the creature they are attacking and the victim must save vs. Death or be knocked down by them and unable to fight until regaining its feet.

Giant Rats: Giant rats are 3 feet long or more, and have gray or black fur. They are often found in the dark corners of dungeon rooms and in areas where undead monsters lurk.

Rhinoceros

Source: Expert

Armor Class	5	No. Appearing	0 (1d12)
Hit Dice	6	Save As	Fighter 3
Move	120' (40')	Morale	6
Attacks	butt or trample	Treasure Type	Nil
Damage	2d4 or 2d8	Alignment	Neutral

Though unintelligent plant eaters, rhinoceroses are extremely dangerous animals with fierce tempers and poor eyesight. Easily startled, they often react to unfamiliar sights or sounds with sudden violence.

If threatened, surprised, or charged, a rhinoceros will stampede in a random direction, goring anything in its path and inflicting double damage with its first successful attack.

Shark

Source: Expert

Stat	Bull	Mako	Great White
Armor Class	4	4	4
Hit Dice	2	4	8
Move	180' (60')	180' (60')	180' (60')
Attacks	1 bite	1 bite	1 bite
Damage	2d4	2d6	2d10
No. Appearing	0 (3d6)	0 (2d6)	0 (1d4)
Save As	Fighter 1	Fighter 2	Fighter 4
Morale	7	7	7
Treasure Type	Nil	Nil	Nil
Alignment	Neutral	Neutral	Neutral

Sharks are vicious predators. They have little intelligence and are unpredictable. They are at-

tracted to the scent of blood within 300', and it will drive them into a feeding frenzy, no morale checks required. They attack by making long, curving passes. Sharks are found in salt water.

Bull sharks are 8' long and brown in color. Bull sharks will ram their prey first to stun it, and then attack the helpless prey the next round.

Mako sharks are 15' long and blue-gray or tan in color. Mako sharks are extremely unpredictable, ignoring swimmers one moment and then, for no apparent reason, attacking.

Great white sharks are 30' long or larger and gray with a white underside. They have been known to destroy small boats.

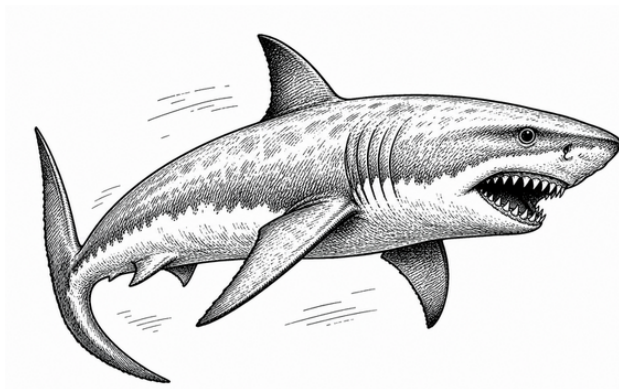

Figure 3: Expert monster illustration: shark

Shrew, Giant

Source: Basic

Armor Class	4	No. Appearing	1d4 (1d8)
Hit Dice	1	Save As	Fighter 1
Move	180' (60')	Morale	10
Attacks	2 bites	Treasure Type	Nil
Damage	1d6 / 1d6	Alignment	Neutral

Giant shrews look like brown-furred rats with long snouts. They can burrow, climb, or jump (up to 5'). They are insectivorous and hunt insects, their main source of food. The eyes of giant shrews are so weak that the creatures are almost blind. They are not affected by light or the lack of it. Like bats, they use very high squeaks to "see" areas and things, and can listen to the echoes so closely that they may "see" things up to 60' away underground as well as a creature with normal sight. A silence 15' radius spell will "blind" a giant shrew. If it cannot hear, it will be confused, and then has an Armor Class of 8 and a penalty of -4 on "to hit" rolls.

Giant shrews do not like large open areas, and remain underground most of the time.

Giant shrews often choose one area to hunt in, and will fight to defend "their" area from other animals (including humans). They are very ferocious and will attack anything. Giant shrews are very quick and will always have initiative on their first attack; in addition they will gain +1 on their initiative roll for their second attack.

Their attack is so ferocious (attacking the head and shoulders of the defender) that when they attack any creature of 3 hit dice (3rd level) or less, the victim must save vs. Death or run away in fear.

Snake

Source: Basic

Stat	Spitting Cobra	Pit Viper	Sea Snake	Giant Rattler	Rock Python
Armor Class	7	6	6	5	6
Hit Dice	1*	2*	3*	4*	5*
Move	90' (30')	90' (30')	90' (30')	120' (40')	90' (30')
Attacks	1 bite or 1 spit	1 bite	1 bite	2 bites	1 bite / 1 squeeze
Damage	1d3 + poison	1d4 + poison	1 + poison	1d4 + poison	1d4 / 2d4
No. Appearing	1d6 (1d6)	1d8 (1d8)	1d8 (1d8)	1d4 (1d4)	1d3 (d-3)
Save As	Fighter 1	Fighter 1	Fighter 2	Fighter 2	Fighter 3
Morale	7	7	7	8	8
Treasure Type	Nil	Nil	Nil	U	U
Alignment	Neutral	Neutral	Neutral	Neutral	Neutral

Snakes are found almost everywhere except for very hot or very cold places. Most snakes do not usually attack unless surprised or threatened. Many (but not all) snakes have poisonous bites.

Spitting Cobra: A spitting cobra is a 3' long grayish-white snake which can squirt a stream of venom up to a distance of 6 feet. It aims for its victim's eyes. If the spit hits, the victim must

save vs.

Poison or be blinded. (This blindness can normally only be removed by a cure blindness spell from the D&D EXPERT rules, but the DM may wish to invent other ways — such as eating a shrieker.) As with most small poisonous snakes, a spitting cobra will not attack human-sized or larger opponents unless startled or threatened. It can either spit or bite in one round, but not both. It will usually spit. The damage given (1-3 points) only applies to the bite; in this case, the victim must save vs. Poison or die in 1-10 (1d10) turns.

Pit Viper: A pit viper is a 5' long greenish-gray poisonous snake with small pits in its head. These pits act as heat sensors, with a range of 60'. The combination of pits and infravision makes it very hard to fight a pit viper; it is so quick that it always gains the initiative (no roll needed). Any victim bitten by a pit viper must save vs.

Poison or die.

Sea Snake: Sea snakes are snakes adapted for living in the sea.

All are poisonous. They average 6' long (for every 3 hit dice) in size, but can be much larger if the DM desires. They must come to the surface of the water to breathe once an hour. Their bite is little more than a pinprick, and will go unnoticed 50% of the time. The victim must save vs. Poison, and the poison is slow-acting; its full effects take 3-6 (1d4 + 2) turns to be felt if the saving throw is failed. (By the time this is felt, there is a 25% chance that not even a neutralize poison spell — see D&D EXPERT rules — can save the victim.) Unlike other snakes, sea snakes will attack humans for food.

Giant Rattlesnake: A giant rattlesnake is a 10' long snake with brown and white scales set in a diamond pattern. On its tail is a dried, scaly rattle, which it often rattles to warn off intruders or attackers who are too large to eat. Giant rattlesnakes are meat-eaters and their bite is poisonous (save vs. Poison or die in 1-6 turns.) They are very fast and may attack a second time at the end of every round.

Rock Python: A rock python is a 20' long giant snake with brown and yellow scales set in a spiral pattern. Its first attack is a bite. If the bite is successful, a rock python will coil around the victim and constrict in the same round. This squeezing does 2d4 points of damage per round, and begins automatically once the bite hits.

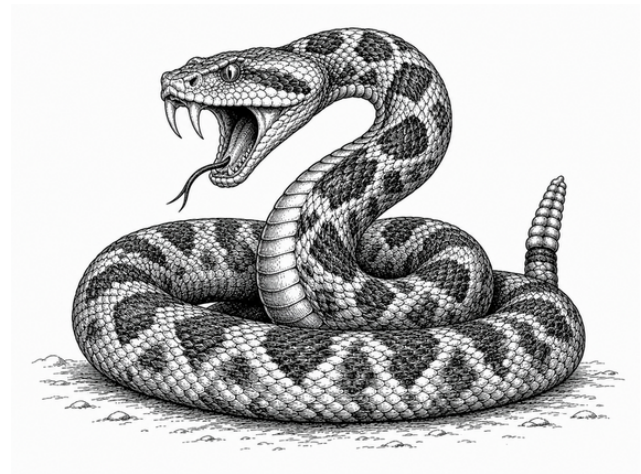

Figure 4: Basic monster illustration: snake

Squid, Giant

Source: Expert

Armor Class	7	No. Appearing	0 (1d4)
Hit Dice	6	Save As	Fighter 3
Move	120' (40')	Morale	7 (9)
Attacks	8 tentacles / 1 bite	Treasure Type	V
Damage	1d4x8 / 1d10 beak	Alignment	Neutral

A giant squid dwells only in the deep sea, rising to the surface only to hunt. A giant squid will sometimes, 25%, wrap its two long tentacles about a boat and squeeze, doing 1-10 points of damage to the boat's hull, while the beak does 2 points per round after the tentacles grapple. Giant squids often, 75%, attempt to snatch seamen from the decks of passing ships and pull them to their lair below to be devoured.

The lesser tentacles do constriction damage after they hit. They can be severed with a single blow that does 6 or more points, while the greater tentacles can be severed with a blow that causes 10 or more points of damage.

If its morale fails, the squid can flee at triple speed and will leave great clouds of ink, 30' radius, twice per day maximum, to confuse pursuers. A large giant squid can even be double or triple normal size.

Toad, Giant

Source: Expert

Armor Class	7	No. Appearing	1d4 (1d4)
Hit Dice	2 + 2	Save As	Fighter 1
Move	90' (30')	Morale	6
Attacks	1 bite	Treasure Type	Nil
Damage	1d4+1	Alignment	Neutral

A giant toad is about the size of a very large dog and weighs 150-250 pounds. These toads can change their skin color to blend into woods or poorly lit dungeons, thus surprising their prey on a roll of 1-3. They can shoot their tongues out to 15' and drag dwarf-sized or smaller victims to their mouths to be bitten. On a "to hit" roll of 20, small prey will be swallowed whole, taking 1-6 points of damage each round thereafter.

Weasel, Giant

Source: Expert

Armor Class	7	No. Appearing	1d4 (1d6)
Hit Dice	4 + 4	Save As	Fighter 3
Move	150' (50')	Morale	8
Attacks	1 bite + special	Treasure Type	V
Damage	2d4	Alignment	Neutral

A giant weasel is 8'-9' long and covered with richly colored fur of white, gold, or brown. These quick, vicious predators hunt singly or in groups. Once they bite, they hold on and suck blood, doing 2-8 points of damage each round until their prey dies or the weasel is killed.

Giant weasels have infravision to 30' and can track by scent. They prefer wounded prey and lair in underground tunnels, where treasure is often found on the bodies of creatures they have dragged back to eat.

Whale

Source: Expert

Stat	Killer Whale	Narwhal	Sperm Whale
Armor Class	6	7	6

Damage	1d20	2d6 / 1d8	3d20
No. Appearing	0 (1d6)	0 (1d4)	0 (1d3)
Save As	Fighter 3	Fighter 12	Fighter 15
Morale	10	8	7
Treasure Type	V	See below	V
Alignment	Neutral	Lawful	Neutral

Killer whale. These are 25' long and are found mainly in cold waters. They live by hunting other sea creatures (even other whales). Creatures of

halfling size or smaller will be swallowed whole if the killer whale scores a 20 on its "to hit" roll. Those swallowed take 1d6 points of damage per round and will drown in 10 rounds unless freed.

Narwhal. The narwhal is 15' long, grey to white in color, and has an 8' long spiral horn on its head (like that of a unicorn). It is an intelligent, magical creature, very independent and secretive. It is rumored that their horns vibrate in the presence of evil. Their horns are worth from 1,000 to 6,000 gold pieces each (1d6 x 1000) for their ivory. Narwhals roam arctic waters.

Sperm whale. This huge whale can grow to be 60' long. It preys on the most feared denizens of the deep (such as the giant squid).

Man-sized or smaller creatures will be swallowed on a die roll that is 4 or more than the score needed to hit, taking 3d6 points of damage per round. Sperm whales will sometimes (10% chance) attack ships, attempting to ram. Should the sperm whale succeed, it will do 6d6 points of damage to the ship.

Figure 5: Expert monster plate: whale

Wolf

Source: Basic

Stat	Normal Wolf	Dire Wolf
Armor Class	7	6
Hit Dice	2 + 2	4 + 1
Move	180' (60')	150' (50')
Attacks	1 bite	1 bite
Damage	1d6	2d4
No. Appearing	2d6 (3d6)	1d4 (2d4)
Save As	Fighter 1	Fighter 2
Morale	8 (6)	8
Treasure Type	Nil	Nil
Alignment	Neutral	Neutral

Wolves are meat-eaters and hunt in packs. Though wolves prefer the wilderness, they will occasionally be found in caves. Captured wolf cubs can be trained like dogs, if the DM permits, but it is difficult. If 3 wolves or fewer are encountered, or if a pack is reduced to less than 50% of its original numbers, their morale is 6 rather than

8.

Dire Wolves: Dire wolves may be found in caves, woods, or mountains. They are larger and more ferocious than normal wolves, and are semi-intelligent. They are fierce enemies and usually

hunt in packs. They are sometimes trained by goblins to be used as mounts. Captured dire wolf cubs can be trained like dogs, if the DM permits, but they are even more savage than normal wolves.

Constructs

Most constructs are immune to **sleep**, **charm**, **hold**, and other mind-affecting magic. They do not eat, sleep, breathe, or feel pain, and often fight until completely destroyed. Depending on the materials and enchantments used in their creation, constructs may possess unusual immunities or weaknesses.

Constructs are commonly used as guardians for tombs, temples, treasure vaults, laboratories, and the hidden strongholds of powerful wizards. Some continue carrying out forgotten commands long after their creators have died.

Animated Armor

Source: Homebrew

Armor Class	2	No. Appearing	1d6
Hit Dice	3	Save As	Fighter: 2
Move	60' (20')	Morale	12
Attacks	1 weapon	Treasure Type	Nil
Damage	By weapon	Alignment	Neutral

Animated armor appears as an empty suit of armor brought to life through enchantment, bound spirits, or ancient curses.

Animated armor usually remains perfectly motionless until intruders approach, causing many victims to mistake it for an ordinary display or decoration. Once awakened, it attacks tirelessly and without fear, obeying its orders until destroyed.

Most animated armor fights with weapons held in mailed hands, though some punch, grapple, or batter foes with heavy gauntlets. They are immune to **sleep**, **charm**, and other mind-affecting magic, and never need rest.

Figure 6: Homebrew Monster illustration: animated armor

Gargoyle*

Source: Basic

Armor Class	5	No. Appearing	1d6 (2d4)
Hit Dice	4	Save As	Fighter 8
Move	90' (30')	Morale	11
Flying Attacks	150' (50')	Treasure Type	C
	2	Alignment	Chaotic
Damage	claws/bite/horn 1d3x2/1d6/1d4		

Gargoyles are winged, horned, clawed creatures resembling the grotesque stone figures found on ancient temples, castles, and cathedrals. Their hides often look exactly like weathered stone, allowing them to remain perfectly motionless and be mistaken for ordinary statues until they suddenly spring to life.

Gargoyles are magical creatures and save as 8th level Fighters. They can only be harmed by magical attacks or magic weapons. Though cruel and vicious, gargoyles are cunning and semi-intelligent, delighting in ambushes and terrorizing weaker creatures. They will attack nearly anything approaching their territory.

Gargoyles are immune to **sleep** and **charm** spells. Because ordinary weapons cannot harm them, the DM should use gargoyles with care unless the adventurers possess at least one magical weapon.

Save As	Fighter 1	Fighter 4	Fighter 5	Fighter 10
Morale	12	12	12	12
Treasure Type	Nil	Nil	Nil	Nil
Alignment	Neutral	Neutral	Neutral	Neutral

A golem is a powerful monster, created and animated by a high-level magic-user or cleric. They can be made of almost any material, but the ones listed are typical. The DM should feel free to create other golems with any special powers desired.

Normally golems can only be hit by magic weapons. Golems are also immune to **sleep**, **charm**, and **hold** spells, as well as all forms of gases. Creating a golem is costly, time consuming, and beyond the power of player characters in the D&D Expert rules.

- **Wood golems** are crude manlike figures about 3' tall, hacked from wood. They move stiffly and have a penalty of -1 on initiative rolls. They burn easily, saving at -2 and suffering one extra point of damage per die from fire-based attacks.
- **Bone golems** are 6' tall creatures made from the bones of dead men bound together into a manlike form. They wield weapons from skeletal arms fastened to their bodies at various points. Either four one-handed weapons or two pole arms may be used by a bone golem, and it will attack up to two enemies per round. Bone golems are immune to fire, cold, and electrical attacks.
- **Amber golems** resemble giant lions or tigers. They are faultless trackers and can detect invisible creatures within 60'.
- **Bronze golems** look somewhat like fire giants. Their skin is bronze and their blood is liquid fire. Any creature hit by a bronze golem takes 1d10 more points of damage from the great heat inside it. Anyone scoring damage on a bronze golem with an edged weapon must save vs. Death Ray or take 2d6 points of damage from the fiery blood spurting out of the wound. Bronze golems are not affected by fire-based attacks.

No. Appearing	1d6 (1d6)	1d4 (1d4)	1d3 (1d3)
Save As	Fighter 3	Fighter 4	Fighter 5
Morale	11	11	11
Treasure Type	Nil	Nil	Nil
Alignment	Lawful	Neutral	Chaotic

A living statue is an enchanted animated creature made by a powerful wizard. It appears to be a perfectly normal statue until it begins to move. A living statue may be of any size or material. Living crystal, iron, and rock statues are three types of living statues which serve as examples, should a DM wish to make up his or her own types. Living statues are not affected by **sleep** spells.

- **Crystal:** Living crystal statues are life forms made of crystals instead of flesh. They can look like a statue of anything, but often appear human.
- **Iron:** Living iron statues have bodies which can absorb iron and steel. When hit, they will take normal damage, but if a non-magical metal weapon is used, the attacker must save vs. Spells

or the weapon will become stuck in the body of the living iron statue, and may only be removed if the statue is killed.

- **Rock:** Living rock statues have an outer crust of stone but are filled with hot magma (fiery lava). When the living rock statue attacks, it will squirt the magma from its finger tips for 2d6 points of damage per hit.

Demons

Each type of demon, especially the mighty demon lords and princes, possesses unusual characteristics and extraordinary abilities. Traits common to all demons are described here; individual demons have additional powers noted in their own entries.

Demons are able to move from their own plane into those of Tarterus, Hades, or Pandemonium, or roam the astral plane. However, they cannot enter the material plane without aid such as conjuration, gate, or similar magic.

Demons are chaotic and evil; the smarter and stronger dominate those weaker and less intelligent than themselves. Lesser demons attack without question and fight until slain.

Demons of type V and greater are not permanently destroyed when their physical forms are slain outside their home plane. Instead, they are forced back to their native plane for a century and a day unless another demon aids their return. Demons encountered on their own plane may be slain normally.

No demon can ever be subdued. Demons may divide their attacks among multiple opponents if their attacks allow. Demons never willingly serve anyone or anything. If forced into service through magic or threat, they continually seek a way to slay their master or captor. Those to whom the demons show a liking to are typically carried off to the demons' plane to become a slave (although a favored one).

Demons can be summoned by characters of any alignment, but controlling one is another matter entirely. A **thaumaturgic circle** keeps out demons of types I-V, while a special **pentacle** is required against demons of type VI or greater. The threat or reward which the conjuring party uses to attempt gaining a demon's service must be carefully handled by the DM. Demons are repelled by holy relics and artifacts.

Demons' Amulets: Demon lords and princes maintain their vital essences in small containers - their souls, so to speak - protecting them while also creating a dangerous vulnerability should the amulet be stolen.

Demons with amulets may use **magic jar** once per day. Their amulets cannot be detected by magical means and appear completely ordinary. Lesser demons usually keep their amulets close at hand, though the most powerful demon princes do not have this limitation.

Possession of an amulet grants temporary power over the demon to whom it belongs, usually for no more than one adventure or 24 hours. The amulet must then be returned or destroyed, condemning the demon prince to abyssment for one year.

Use of an amulet is extremely dangerous. Possession of one doubles the chance of attracting another demon's attention, and any uncontrolled demon immediately attacks the possessor. If the wielder loses possession while commanding the demon, the demon immediately turns on them.

Demons frequently roam the astral and ethereal planes. Their attention is also attracted by persons in an ethereal state. Speaking the true name of a particularly powerful demon while on the astral or ethereal planes carries a base 5% chance that the demon hears the speaker and turns its attention toward them. Unless prepared to avoid such attention - or to control the demon - the demon will thereupon immediately attempt to slay, by whatever means are most expeditious, the one pronouncing his name.

If demon types I through VI are encountered in their lair, there is a 75% chance of encountering 1d6 demons of the same type and a 25% chance of encountering 1d6 mixed demons of types I-VI.

All demons share the following traits:

- Types I-III are affected by non-magical weapons
- Type IV and greater are not affected by non-magical weapons
- Infravision
- Teleportation (no error)
- Darkness (radius varies)
- Gate (specifics vary)

Demons are affected by attack forms as follows:

- Acid: full damage
- Cold: half damage
- Electricity (lightning): half damage
- Fire (dragon, magical): half damage
- Gas (poisonous, etc.): half damage
- Iron weapon: full damage
- Magic missile: full damage
- Poison: full damage
- Silver weapon: treat as non-magical

Because of their strange telepathy, demons understand all intelligent communication. Demons with average or greater intelligence may also converse normally.

Demogorgon

Source: AD&D 1E Conversion

Armor Class	-8	No. Appearing	1
Hit Dice	20***	Save As	Fighter 20
Move	150' (50')	Morale	12
Attacks	2 tentacles / tail	Treasure Type	R, S, J, V
Damage	1d6 / 1d6 / special	Alignment	Chaotic

The rivalry between demon lords is great, but the enmity between Demogorgon and Orcus is immense and unending. Demogorgon is a terrible opponent.

First: He possesses great powers in his two heads. Should he fix the gaze of both upon his enemies he is able to hypnotize them. This hypnosis affects from - 10d10 creatures of 1-3 hit dice - 5d8 with 4-6 hit dice - 3d8 with 7-9 hit dice - 2d6 with 10-12 hit dice - 1-4 with 13 or more hit dice.

Those over 15 hit dice save versus magic; all others are automatically hypnotized. Victims remain under the effect for 1 turn, obeying nearly all instructions short of self-destruction. For 1d6 turns afterwards they tend to continue acting upon lingering suggestions. Demogorgon's left head may instead use a gaze with the effect of a **rod of beguiling**, while the gaze of his right head causes insanity for 1d6 turns. Victims save versus magic to avoid either gaze.

Second: Demogorgon is able to lash his forked tail, striking with it as a whip-like weapon. Its touch causes energy drain of 1d4 levels, the tail striking as a flail for hit determination.

Third: His tentacles are also deadly weapons, each causing 1d6 hit points of damage. Opponents of lesser stature, especially those from the material plane such as humans, dwarves, and

elves, are subject to a terrible supernatural rot. A struck limb becomes useless in 6 melee rounds and drops off in another 6 rounds. Body hits permanently remove 25% of the victim's hit points after 6 melee rounds, cumulative per hit. A **cure disease** cast within the initial 6-round period saves the limb, which heals in 1d4 weeks, and restores body damage completely.

Whenever he desires, Demogorgon may use any one of the following powers: **continual darkness**, **charm person**, **create illusion** (as a wand of illusion), **cause fear** (as a wand of that sort), **levitate** (as a 16th level magic-user), **detect magic**, **read magic**, **read languages**, **detect invisible**, **ESP**, **dispel magic**, **clairvoyance**, **clairaudience**, **suggestion**, **water breathing**, **polymorph self**, **wall of ice**, **charm monster**, or **telekinesis** up to 7,000 cn weight with one or both heads. Once per day he may cast **feeblemind**, **project image**, **power word stun**, any **symbol**, or **sticks to snakes**. He may also **gate** in other demons with an 85% chance of success: 50% chance for type I-IV demons and 50% chance for a type V or VI demon.

Description: It is contended by some that this demon prince is supreme, and in any event he is awesome in his power. This gigantic demon is 18' tall and reptilian. Demogorgon has two heads bearing the visages of evil baboons or perhaps mandrills, with the hideous coloration of the latter beasts. His blue-green skin is plated with snake-like scales, his body and legs are those of a giant lizard, his twin necks resemble serpents, and his thick tail is forked. Rather than arms, he possesses great tentacles. His appearance testifies to his command over cold-blooded things such as serpents, reptiles, and octopi.

Devils

Devils are the primary inhabitants of the planes of Hell and the embodiment of lawful evil. They are the eternal enemies of chaotic demons and all servants of good.

Devil society is governed by an immense and inflexible hierarchy enforced by the archdevils who rule the infernal planes. Though rigidly ordered, Hell is filled with endless rivalries, jealousies, and political intrigues among barons, dukes, marquises, princes, and lesser devils all seeking greater power and favor.

All devils may travel freely between the planes of Hell, though passage often requires the permission of the ruling archdevil. Devils may also move to Gehenna, Hades, and Acheron, and rarely travel the Astral Plane. They cannot enter the Prime Material Plane except through magical summoning, gate spells, or invocation of their secret names.

All devils possess powerful magical abilities that vary by type. Common powers include animate dead, charm person, fear, know alignment, phantasmal force, suggestion, teleportation without error, and the ability to summon other devils. Devils may use these abilities at will, though generally only one at a time.

All devils possess infravision and can understand

and speak any language.

Only a devil's physical form can be destroyed outside Hell. A devil slain beyond the lower planes reforms in Hell as a lowly lemure and must endure 9 decades of infernal servitude before regaining its former rank and status.

Once battle is joined, devils never surrender or submit. Lesser devils fight to the death with fanatical determination, while greater devils and archdevils may negotiate if it serves their interests. Devils may divide their attacks among multiple opponents if advantageous.

Devils are masters of laws, bargains, and contracts. They obey the exact wording of agreements while relentlessly exploiting ambiguities, omissions, and hidden loopholes. Bargaining with devils is notoriously dangerous, as even the smallest oversight may lead to ruin.

As with demons, proper magical circles are essential when summoning devils. More powerful devils require increasingly elaborate and costly protections. Devils are also repelled by powerful holy relics and good-aligned artifacts.

Devils resist many forms of attack. They are completely immune to fire and take only half damage from cold and poisonous gas. They suffer full damage from acid, electricity, magic missiles, poison, and silver weapons. Iron weapons inflict no special additional damage.

Dragons

Dragons are the archetypal foes of fantasy adventure games. Some are weak enough that even inexperienced adventurers may dare to face them, while the eldest and greatest dragons are powerful enough to challenge entire companies of heroes. Even high-level parties may struggle against a mated pair or family of ancient dragons.

Dragons are most commonly identified by color. In some campaigns these colors are literal, with red dragons always bearing crimson scales and breathing fire, while in others the colors are symbolic or traditional. Some worlds also feature especially powerful dragons with more than 8 hit points per Hit Die, or even larger Hit Dice such as d10 or d12.

Despite their many kinds, dragons share several common traits. Dragons are intelligent, proud creatures and may sometimes accept a formal

challenge rather than fight to the death. Whether a dragon agrees, and under what conditions, depends on its personality, alignment, and the nature of the challenge.

As dragons age, they grow steadily more powerful. Newly hatched dragons typically have only 1 hit point per Hit Die, while extremely ancient dragons over 400 years old may possess the maximum 8 hit points per Hit Die.

All dragons radiate an aura of supernatural fear, similar to a fear spell, affecting creatures below 5th level unless they successfully save versus Spells. Dragons with 5 or more hit points per Hit Die also gain a bonus of +1 on saving throws for each hit point per die above 4. Thus, an ancient dragon with 8 hit points per Hit Die gains a +4 bonus on all saving throws.

Spells by Level	3 / - / -	4 / - / -	3 / 3 / -	4 / 4 / -	3 / 3 / 3	4 / 4 / 4

Dragons are a very old race of huge winged lizards. They like to live in isolated, out-of-the-way places where few humans are found. Though the color of their scaly hide makes dragons look different, they all have several traits in common: they are hatched from eggs, are meat-eaters, have

Breath Weapons, love treasure, and will do everything possible to save their own lives, including surrender.

Dragons are proud of their long history, and because of this they tend to think less of the younger races. Chaotic dragons might capture

humans, but will usually kill and eat them immediately. Neutral dragons might either attack or ignore a party completely. Lawful dragons, however, may actually help a party if the characters are truly worthy of the honor. When playing a dragon, the DM should remember that even the hungriest dragon will pause and listen to flattery, provided no one is attacking it and it understands the speaker.

BREATH WEAPONS DAMAGE: All dragons have a special attack with their Breath Weapon in addition to their claw and bite attacks. Any dragon can use its Breath Weapon up to 3 times each day. A dragon's first attack is always with its Breath Weapon. The number of points of damage any Breath Weapon does is equal to the dragon's remaining number of hit points. Any damage done to a dragon will reduce the damage it can do with its Breath Weapon.

After the first Breath attack, a dragon may choose to attack with claws and bite. To determine this randomly, roll 1d6. A result of 1-3 means that the dragon will use its claw and bite attacks; a result of 4-6 means that the dragon will breathe again.

SHAPE OF BREATH: A dragon's Breath Weapon appears as one of three different shapes: cone-shaped, a straight line, or a cloud of gas.

A cone-shaped Breath begins at the dragon's mouth, where it is 2' wide, and spreads out until it is 30' wide at its furthest end. For example, the area of effect of a white dragon's Breath is a cone 80' long and 30' wide at its far end.

A line-shaped Breath starts in the dragon's mouth and stretches out toward its victim in a straight line, even downwards. Even at its source, a line-shaped Breath is 5' wide.

A cloud-shaped Breath billows forth from the dragon's mouth to form a 50'x40'x20' tall cloud around the dragon's targets directly in front of it.

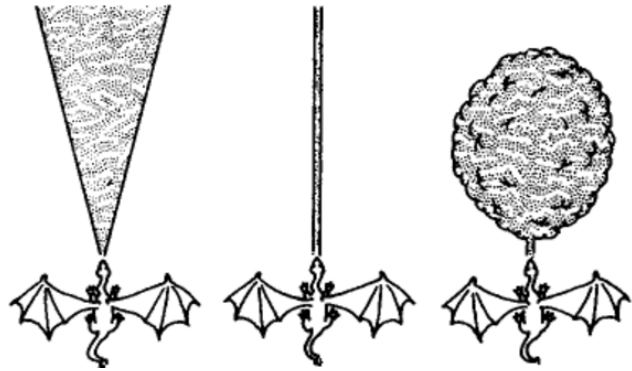

Figure 9: Basic diagram: dragon breath shapes

- Saving Throws:** Anyone caught within the area of effect of a dragon's Breath Weapon may make a saving throw. A successful saving throw means that the victim takes only 1/2 damage from the Breath. Dragons are never affected by the normal or smaller versions of their own Breath Weapons, and automatically make their saving throws against any attack form that is the same as their Breath Weapon. For example, a red dragon will take no damage from burning oil, and will always take only 1/2 damage from a fire-type magic spell such as a fire ball.
- Talking:** Dragons are intelligent, and some dragons can speak Dragon and Common. The percentage listed under Chance of Talking is the chance that a dragon will be able to talk. Talking dragons are also able to use Magic-user/Elf spells. The number of spells and their levels are given above under Spells by Level. For example, 3 / 3 / - would mean that the dragon can cast 3 first-level spells and 3 second-level spells, but no third-level spells. Dragon spells are usually selected randomly.
- Sleeping Dragons:** The percentage chance given under Chance of Being Asleep applies whenever a party encounters a dragon on the ground; flying dragons are never asleep. Any result greater than the percentage means that the dragon is not asleep, though it may be pretending to be. If a dragon is asleep, it may be attacked with a bonus of +2 on attack rolls for one round, during which it will wake. Combat proceeds normally from the second round on.
- Subduing Dragons:** Whenever characters

encounter a dragon, they may choose to try to subdue it rather than kill it. To subdue a dragon, all the attacks must be with the flat of the sword; missile weapons and spells may not be used. Attacks and damage are determined normally when trying to subdue the dragon. The dragon will fight normally until it reaches 0 or fewer hit points, at which time it will surrender. A dragon may be subdued because it realizes that its attackers could have killed it if they had been striking to kill. A subdued dragon will attempt to escape or turn on its captor if given a reasonable chance to do so through the party's actions. For example, a dragon left unguarded at night, or ordered to guard a position alone, would consider these reasonable chances. A subdued dragon must be sold. The price is up to the DM, but should never exceed 1,000 gp per hit point. The dragon may be forced to serve the characters who subdued it. If a subdued dragon is ever ordered to perform a task that is apparently suicidal, it will attempt to escape and/or kill its captors.

- **Age:** The statistics given are for an average-sized dragon of its type. Younger dragons are smaller and have acquired less treasure; older dragons are larger and have acquired more. Dragons generally range in size from 3 hit dice smaller to 3 hit dice larger than average. For example, red dragons could be found having 7 to 13 hit dice, depending on their age.
- **Treasure:** Younger dragons may have collected as little as 1/2 the normal listed treasure; older dragons may have as much as double the listed amount. Dragon treasure is only found in the dragon's lair. These lairs are rarely left unguarded, and are well-hidden to prevent easy discovery.
- **Gold dragons:** always talk and use spells. They can also change their shape, and often appear in the form of a human or animal. Gold dragons may breathe either fire, like a red dragon, or chlorine gas, like a green dragon, though they still have a total of 3 Breath Weapon attacks per day, not 6. The type of Breath attack should be chosen by the DM to fit the situation.

Dragons are extremely powerful and should be used with caution when encountered by low-level player characters. It is recommended that until

characters reach the fourth level and higher, only the youngest and smallest dragons be used by the DM.

Dragon Turtle

Source: Expert

Armor Class	-2	No. Appearing	0 (1)
Hit Dice	30	Save As	Fighter 15
Move	30' (10')	Morale	10
Swimming	90' (30')	Treasure Type	H
Attacks	2 claws / 1 bite	Alignment	Chaotic
Damage	1d8x2/10d6		

Dragon turtles appear to be some unusual mixture of a dragon and a gigantic turtle. They have the head, limbs and tail of a great dragon and the hard shell of a turtle. These creatures live in the depths of great oceans and seas, seldom surfacing or approaching land. Dragon turtles are so large that sailors have mistakenly anchored on ones floating on the surface, thinking the hard shell to be a small island.

Besides its powerful claws and bite, the dragon turtle is also able to use a breath weapon. It can breathe a 30' wide cloud of steam to a distance of 90'. This breath weapon will do damage in the same manner as a dragon's, inflicting hit points of damage equal to the current hit points of the dragon turtle.

Dragon turtles live in great caverns on the bottom of the deepest oceans, where they keep the treasures of sunken ships. On occasion they will rise under ships, attempting to overturn them and devour the occupants.

Note: Dragon turtles are extremely powerful creatures that should not be used unless the player characters are of very high level.

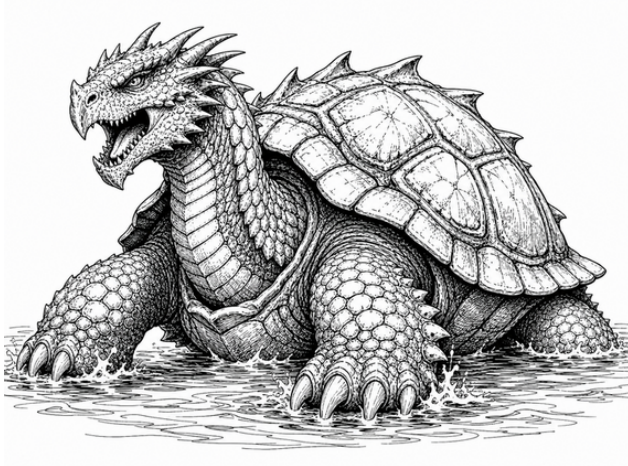

Figure 11: Expert monster illustration: dragon turtle

Sea Dragons

Source: Expert

Armor Class	1	No. Appearing	0 (1d4)
Hit Dice	8	Save As	Fighter: 8 (see below) 9
Move	180' (60') (Swimming or Flying)	Morale	
Attacks	1 bite or 1 spit	Treasure Type	H
Damage	3d8 or spe- cial	Alignment	Neutral

Sea dragons are intelligent and usually green in color with a bright yellow-green crest. Sea dragons have a 20% chance of talking and being spell casters, with three 1st level and three 2nd level spells.

Their breath weapon is a 20' diameter glob of poison that they can spit up to 100', three times per day (50% chance to use). Those struck must save vs. Dragon Breath or die. (This poison loses its effectiveness after 1 round). Their bite is not poisonous.

The statistics given are for an average-sized sea dragon. Younger dragons, as with other dragons, are smaller and have acquired less treasure; older sea dragons are larger and have acquired more.

Sea dragons generally range in size from 3 hit dice smaller to 3 hit dice larger than average.

Sea dragons have fin-like wings which enable them to glide above the water for up to 6 rounds (much like "flying fish"). They live in caves or sunken ships at the bottom of the ocean, and may attack passing ships for food and treasure.

Wyvern

Source: Expert

Armor Class	3	No. Appearing	1-2 (1-6)
Hit Dice	7*	Save As	Fighter 4
Move	90' (30')	Morale	9
Flying	240' (80')	Treasure Type	E
Attacks	1 bite / 1 sting	Alignment	Chaotic
Damage	2d8/1d6 + poison		

A wyvern looks like a two-legged, winged dragon with a long tail. In combat, the wyvern will bite and arch its tail over its head to hit opponents in front of it. Those stung by the tail must save vs. Poison or die. These beasts prefer to live on cliffs or in forests, but may be found anywhere.

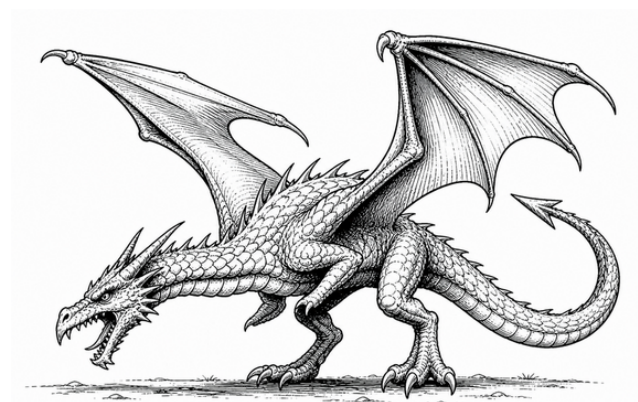

Figure 12: Expert monster illustration: wyvern

Elementals

Djinni, Lesser*

Source: Expert

Armor Class	5	No. Appearing	1 (0)
Hit Dice	7 + 1	Save As	Fighter 14
Move	90' (30')	Morale	12
Flying	240' (80')	Treasure Type	Nil
Attacks	fists or whirlwind	Alignment	Neutral
Damage	2d8 or 2d6 + special		

The djinn are intelligent, free-willed air elementals. They appear as tall, human-like beings, surrounded with clouds. Djinn are highly magical in nature and save as 14th level fighters. They can only be harmed by magic or magical weapons.

A djinni can perform any of its seven powers three times a day:

- Create food and drink, as a 7th level cleric
- Create temporary metallic objects up to 1,000 cn weight. Duration varies by hardness, from 1 day for gold to 1 round for iron
- Create soft goods and wooden objects, permanent, to a maximum of 1000 cn weight
- Become invisible
- Assume gaseous form
- Form itself into a whirlwind.

In addition, a djinni can create illusions that affect both sight and hearing at will. Such illusions last until touched or magically dispelled; the djinni need not concentrate to maintain them.

Djinn have two forms of attack:

A djinni can form itself into a whirlwind, 70' tall, 20' diameter at the top, 10' diameter at base, that moves 120' (40') per turn. The djinni requires 5 rounds to enter or leave whirlwind form. The djinni-whirlwind will do 2d6 points of damage to all in its path and will sweep aside all creatures with fewer than 2 hit dice who do not save vs. Death Ray.

When not in whirlwind form, a djinni strikes once per round with its fists for 2d8 points of damage.

If a djinni is slain, it returns to its own plane.

A djinni can carry 6000 cn weight without tiring. Up to 12,000 cn weight can be carried for 3 turns walking or 1 turn flying. Afterwards, a djinni must rest for one turn.

Efreeti, Lesser*

Source: Expert

Armor Class	3	No. Appearing	1 (1)
Hit Dice	10*	Save As	Fighter 15
Move	90' (30')	Morale	12
Flying	240' (80')	Treasure Type	Nil
Attacks	1	Alignment	Chaotic
Damage	2d8		

Efreet are free-willed fire elementals. They usually appear as clouds of smoke that solidify into giant demonic-faced men surrounded by flame. The air around them is always hot and smoky, they are highly magical in nature, and they can only be hit with magic weapons.

Efreet can create objects, create illusions, and turn invisible like djinn. They may also create a wall of fire up to 3 times per day. An efreeti can transform itself into a pillar of flame for up to 3 rounds, setting flammable items within 5' alight and doing an extra 1-8 points of damage to creatures it strikes while in that form.

Efreet may fly and carry up to 10,000 cn weight while flying. They can be summoned by high-level magic-users who know the special spells required, but once summoned they must be carefully

controlled.

Alignment	Neutral	Neutral	Neutral	Neutral

Elementals can be brought forth only from a large amount of their element, open air, bare earth or rock, large fire, or a large pond. After being summoned they must be totally controlled at all times by the person who summoned them. Control requires complete concentration. If the summoner moves

over half speed, takes damage in combat, or does anything besides paying attention to the elemental, the elemental will turn and attempt to attack its summoner. It will also attack any creature in the path between it and the one who summoned it. Once control is lost, it can never be regained. An elemental vanishes when dispelled, when the elemental is slain, or when the summoner orders the elemental to return from whence it came while it is still under control. Elementals can be hit only by magic or magic weapons.

Staff elementals, the weakest, are summoned by a magic-user with a special staff. Device elementals are summoned with the use of a special miscellaneous magic item. Conjured elementals are summoned by the use of the 5th level magic-user or elf spell.

Kind	Armor Class	Hit Dice	Damage	Save As
Staff	2	8	1d8	Fighter 8
Device	0	12	2d8	Fighter 12
Conjured	-2	16	3d8	Fighter 16

- **Air elementals:** appear as great whirlwinds 2' tall and 1/2' in diameter for each hit die they have. The whirlwind will catch and sweep away creatures of less than 2 hit dice unless a saving throw vs. Death Ray is made. Air elementals do an extra 1-8 points of damage against flying opponents.
- **Earth elementals:** appear as huge man-like figures 1' tall for each hit die they have. Earth elementals cannot cross a water barrier wider than their height. Earth elementals do an extra 1-8 points of damage against opponents on the ground.
- **Fire elementals:** appear as swirling pillars of roaring flame 1' tall and 1' in diameter for each hit die they have. They cannot cross a water barrier wider than their own diameter. They do an additional 1d8 points of damage against all creatures with cold-based attacks.
- **Water elementals:** appear as great waves of water 1/2' tall and 2' in diameter for each hit die they have. Water elementals are not able to move more than 60' from water. They do an extra 1d8 points of damage against opponents in water.

Salamander*

Source: Expert

No. Appearing	1d4+1 (2d4)	1d3 (1d3)
Save As	Fighter 8	Fighter 12
Morale	8	9
Treasure Type	F	E
Alignment	Neutral	Chaotic

- **Flame salamander:** is a form of free-willed fire elemental that looks like a giant snake, 12' to 16' long, with the head and limbs of a lizard. It has scales of bright orange-yellow and orange-red. All creatures within 20' will take 1d8 points of damage per round from the intense heat the salamander generates. Flame salamanders are immune to all fire-based attacks. These creatures are intelligent and prefer to live near, or in, volcanoes or in very hot, dry lands.
- **Frost Salamander:** looks like a giant lizard with 6 legs. Its scales are white or blue-white in color. When it fights, it rears up and strikes with the front four legs as well as fangs. All creatures within 20' will take an additional 1d8 points of damage each round from the extreme

cold the monster radiates. Frost salamanders are immune to all cold-based attacks. They live in frozen wastelands, glaciers, and icy tundras.

Frost and flame salamanders hate each other, and will attack one another on sight.

Figure 14: Expert monster plate: salamander

Humanoids

“Humanoids” are evil-aligned, human-like creatures such as orcs, goblins, and kobolds. Most humanoids live in tribes, clans, or warbands ruled by the strongest or most cunning leaders.

Larger groups often include shamans, witch doctors, or other tribal spellcasters

Bugbear

Source: Basic

Armor Class	5	No. Appearing	2d4 (5d4)
Hit Dice	3+1	Save As	Fighter 3
Move	90' (30')	Morale	9
Attacks	1 weapon	Treasure Type	B
Damage	2d4 or by weapon + 1	Alignment	Chaotic

Bugbears are giant hairy goblins. Despite their size and awkward walk, they move very quietly and attack without warning whenever they can. They surprise on a roll of 1-3 (on 1d6) due to their stealth. When using weapons, they add + 1 to all damage rolls due to their strength.

Figure 15: Basic monster illustration: bugbear

Gnoll

Source: Basic

Armor Class	5	No. Appearing	1d6 (3d6)
Hit Dice	2	Save As	Fighter 2
Move	90' (30')	Morale	8
Attacks	1 weapon	Treasure Type	D
Damage	2d4 or by weapon + 1	Alignment	Chaotic

Gnolls are beings of low intelligence that appear to be human-like hyenas. They may use any

weapons. They are strong, but dislike work and prefer to bully and steal for a living. For every 20 gnolls encountered, one will be a leader with 16 hit points who attacks as a 3 hit dice monster. Gnolls are rumored to be the result of a magical combination of a gnome and a troll by an evil magic-user.

Goblin

Source: Basic

Armor Class	6	No. Appearing	2d4 (6d10)
Hit Dice	1-1	Save As	Normal Man
Move	60' (20')	Morale	7 or special
Attacks	1 weapon	Treasure Type	R (C)
Damage	1d6 or by weapon	Alignment	Chaotic

Goblins are a small incredibly ugly human-like race. Their skin is a pale earthy color, such as chalky tan or livid gray. Their eyes are red, and glow when there is little light, somewhat like rat's eyes.

Goblins live underground and have well-developed infravision (heat-sensing sight) to 90'. In full daylight they fight with a penalty of -1 on their “to hit” rolls. Goblins hate dwarves and will attack them on sight. There is a 20% chance that when goblins are encountered, 1 of every 4 will be riding a dire wolf.

In the goblin lair lives a goblin king with 15 hit points who fights as a 3 hit dice monster and gains + 1 on damage rolls. The goblin king has a bodyguard of 2d6 goblins who fight as 2 hit dice monsters and have 2d6 hit points each. The king and his bodyguard may fight in full daylight without a penalty. The goblin morale will be 9 rather than 7 as long as their king is with them and still alive.

Treasure type C is only found in the goblin lair or when encountered in the wilderness.

Hobgoblin

Source: Basic

Armor Class	6	No. Appearing	1d6 (4d6)
Hit Dice	1 + 1	Save As	Fighter 1
Move	90' (30')	Morale	8 or see below
Attacks	1 weapon	Treasure Type	D
Damage	1d8	Alignment	Chaotic

Hobgoblins are bigger and meaner relatives of goblins. They live underground but often hunt above ground and have no penalties for fighting in full daylight. A hobgoblin king and 1-4 (1d4)

bodyguards live in the hobgoblin lair. The king has 22 hit points and fights as a 5 hit dice monster, gaining a bonus of + 2 on damage.

The bodyguards all fight as 4 hit dice and have 3-18 (3d6) hit points each. As long as their king is alive and with them, hobgoblin morale is 10 rather than 8.

Kobold

Source: Basic

Armor Class	7	No. Appearing	4d4 (6d10)
Hit Dice	1/2 (1d4 hp)	Save As	Normal Man
Move	60' (20')	Morale	6 or see below
Attacks	1 weapon	Treasure Type	P (J)
Damage	1d4 or weapon -1	Alignment	Chaotic

These small, evil dog-like men usually live underground. They have scaly rust-brown skin and no hair. They have well developed infravision (heat-sensing sight) to a 90' range. They prefer to attack by ambush. A kobold chieftain and 1-6 bodyguards live in the kobold lair. The chieftain has 9 hit points and fights as a 2 hit dice monster. The bodyguards each have 6 hit points and fight as 1 + 1 hit dice. As long as the chieftain is alive, all kobolds with him have a morale of 8 rather than 6. Kobolds hate gnomes and will attack them on sight. Treasure type J is only found in encounters in the lair or in the wilderness.

Figure 16: Basic monster illustration: kobold

Lizard Man

Source: Basic

Armor Class	5	No. Appearing	2d4 (6d6)
Hit Dice	2 + 1	Save As	Fighter 2
Move	60' (20'); in water 120' (40')	Morale	12
Attacks	1 weapon	Treasure Type	D
Damage	1d6+1 or weapon + 1	Alignment	Neutral

These water-dwelling creatures look like men with lizard heads and tails. They live in tribes. They will try to capture humans and demi-humans and take the victims back to the tribal lair as the main course of a feast. Lizard men are semi-intelligent and use weapons such as spears and large clubs (treat the clubs as maces) gaining a bonus of + 1 on damage rolls due to their great strength. Lizard men are often found in swamps, rivers, and along seacoasts as well as in dungeons.

Figure 17: Basic monster illustration: lizard man

Orc

Source: Basic

Armor Class	6	No. Appearing	2d4 (10d6)
Hit Dice	1	Save As	Fighter 1
Move	120' (40')	Morale	8
Attacks	1 weapon	Treasure Type	D
Damage	1d6 or weapon	Alignment	Chaotic

Orcs are ugly human-like creatures who look like a combination of animal and man. Orcs are nocturnal (usually sleeping in the day and active at

night or in the dark), and prefer to live underground.

When fighting in daylight, they must subtract 1 from their “to hit” rolls. They have bad tempers and do not like other living things; they will often kill something for their own amusement. They are afraid of anything which looks larger and stronger than they are, but may be forced to fight by their leaders.

Orc leaders gain their positions by fighting and defeating (or killing) the others. One member of any group of orcs will be a leader with 8 hit points who gains a bonus of + 1 on damage rolls. If this “leader” is killed, the morale of the group becomes 6 instead of 8.

Orcs may often be hired at low cost as soldiers, and are often used for armies by Chaotic leaders (both humans and monsters). The orcs are satisfied by being allowed to kill and burn as much as they want. Orcs prefer swords, spears, axes, and clubs for weapons.

They will not use mechanical weapons (such as catapults), as only their leaders understand how to operate them.

There are many different tribes of orcs. Members of different tribes are not usually friendly with each other, and may start fighting unless their leaders are present. An orc lair has only one tribe. Each tribe will have as many female orcs as males, and 2 children (“whelps”) for each 2 adults. The leader of an orc tribe is a chieftain who has 15 hit points, attacks as a 4 hit dice monster, and gains + 2 on damage rolls. For every 20 orcs in a tribe, there may be an ogre with them (a 1 in 6 chance). (If the D&D EXPERT rules are used, there is a 1 in 10 chance of a troll living in the lair as well.)

Troglodyte

Source: Basic

Armor Class	5	No. Appearing	1d8 (5d8)
Hit Dice	2*	Save As	Fighter 2
Move	120' (40')	Morale	9
Attacks	2 claws / 1 bite	Treasure Type	A
Damage	1d4 each	Alignment	Chaotic

A troglodyte is an intelligent human-like reptile with a short tail, long legs, and a spiny comb on its head and arms. Troglodytes walk upright and use their hands as well as humans. They hate most other creatures, and will try to kill anyone they meet.

They have a chameleon-like ability to change colors and use it to hide by rock walls, surprising on a roll of 1-4 on 1d6. They secrete an oil which produces a stench that will nauseate humans and demi-humans unless the victims save vs. Poison. Nauseated characters have a -2 penalty on their attack rolls while in hand-to-hand combat with the troglodytes.

Figure 18: Basic monster illustration: troglodyte

Giants

Far from being mere brutes, giants are often surprisingly cunning, making up for their limited intelligence with patience, strength, and ruthless practicality. Though proud and arrogant, giants may sometimes be bargained with if cooperation serves their interests, especially with creatures of similar alignment.

Despite their many kinds, all giants share certain traits. Their immense strength, usually ranging from 19-25, allows them to hurl great rocks with the force of a catapult, even at close range. Young or immature giants are proportionally weaker than adults.

Giants are also famously greedy, especially for gold. When away from their cave dens or strongholds, they commonly carry 1,000-6,000 coins, usually in gold. They almost always keep one or two large rocks at hand as convenient weapons and as a brutal display of strength.

All giants speak their own racial tongue as well as an alignment language.

Armor Class	5	No. Appearing	1 (1d4)
Hit Dice	13*	Save As	Fighter 13
Move	90' (30')	Morale	9
Attacks	1	Treasure Type	E + 5000 gp
Damage	3d10	Alignment	Chaotic

A cyclops is a rare type of giant, noted for its great size and the single eye in the center of its forehead. A cyclops is about 20' tall. It has poor depth perception due to its single eye, and strikes with a penalty of -2 on all "to hit" rolls. A cyclops will usually fight with a wooden club. A cyclops can throw rocks up to a distance of 200 feet with a penalty of -2 to hit. These rocks will cause 3-18 points of damage to any creature struck.

Some cyclops, 5%, are able to cast a **curse** once a week. The DM should decide the exact nature of the **curse**.

A cyclops usually lives alone, though a small group may sometimes share a large cave. They spend their time raising sheep and grapes. Cyclopes are known for their stupidity, and a clever party can often escape from them by trickery.

- **Hill giants** are hairy, stupid brutes about 12' tall who wear skins and raid nearby human settlements for food and plunder.
- **Stone giants** are 14' tall with gray rock-like skin and hurl boulders up to 300'.
- **Frost giants** are pale, cold-dwelling raiders with bear or wolf guards and immunity to cold-based attacks.
- **Fire giants** have red skin, dark hair, and homes near volcanic regions; they are immune to fire-based attacks and often keep hydras or hellhounds as guards.
- **Cloud giants** are tall, sharp-sensed mountain or cloud dwellers who often keep giant hawks or dire wolves.
- **Storm giants** are the tallest of all giants, love thunder storms, and in a storm may hurl lightning that does damage equal to their current hit points, with a save vs. Spells for half.

Figure 19: Expert monster illustration: giants

Ogre

Source: Basic

Armor Class	5	No. Appearing	1-6 (2-12)
Hit Dice	4+1	Save As	Fighter: 4
Move	90' (30')	Morale	10
Attacks	1club	Treasure Type	C + 1000
Damage	1-10	Alignment	gp Chaotic

Ogres are huge fearsome human-like creatures, usually 8 to 10 feet tall. They wear animal skins

for clothes, and often live in caves.

When encountered outside their lair, they will be carrying 100-600 gp (1d6 x 100) in large sacks. Ogres hate Neanderthals and will attack them on sight.

Troll

Source: Expert

Armor Class	5	No. Appearing	1d6 (2d6)
Hit Dice	4 + 1	Save As	Fighter 4
Move	90' (30')	Morale	10
Attacks	1 club	Treasure Type	C + 1000
Damage	1d10	Alignment	gp Chaotic

Thin, rubbery, and loathsome, trolls stand nearly 8' tall. They are intelligent and prefer humanoid creatures over all other foods. Trolls live in caves, dungeons, wastelands, and in ruined dwellings of the humanoids they have slain and eaten.

Trolls are strong and rend their opponents with talons and sharp teeth. A troll has the power of regeneration, the ability to heal and grow back together. A troll will begin to heal 3 rounds after it has taken damage. A troll's wounds will heal themselves at a rate of 3 hit points per round, and even severed limbs will crawl back to the body and rejoin. The troll cannot regenerate damage from fire or acid. In game turns, this means that unless totally consumed by fire or acid, a troll will eventually regenerate completely. If reduced to 0 hit points by other than fire or acid damage, the troll will heal enough to fight again in 2-12 rounds. The morale in parentheses applies only when the troll is attacked by fire or acid.

Insects

Insects and similar creeping creatures are common in dungeons, ruins, and wilderness areas. Though many are merely oversized versions of normal vermin, others are strange and deadly monsters driven by hunger, instinct, or hive behavior.

Ant, Driver

Source: Basic

Armor Class	3	No. Appearing	2d4 (4d6)
Hit Dice	4*	Save As	Fighter 2
Move	180' (60')	Morale	7 and see below
Attacks	1	Treasure Type	U or see below
Damage	2d6	Alignment	Neutral

Driver ants are giant black ants about 6' long. They are ravenous omnivores that will devour nearly anything edible in their path.

Once engaged in combat, driver ants fight to the death and may even cross flames to reach their prey. Their nest-lairs are always guarded by 4d6 driver ants.

Deep within the nest is a massive egg-laying queen attended by countless workers and larvae. A colony will defend its queen with fanatical fury, and the destruction of the queen usually causes the colony to scatter within a few days.

Legends claim driver ants sometimes mine and collect gold. There is a 30% chance a driver ant lair contains 1d10 thousand gp worth of gold nuggets.

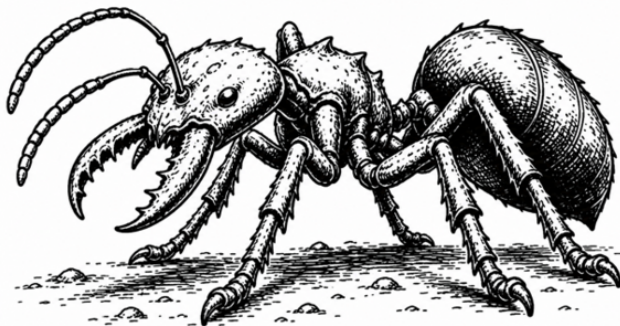

Figure 20: Basic monster illustration: driver ant

Bee, Killer

Source: Basic

Armor Class	7	No. Appearing	1d6 (5d6)
Hit Dice	1/2* (1d4 hp)	Save As	Fighter 1
Move	150' (50')	Morale	9
Attacks	1 sting	Treasure Type	See below
Damage	1d3 + special	Alignment	Neutral

Killer bees are giant bees about 1' long with an extremely vicious temper. They almost always attack on sight and automatically attack any creature approaching within 30' of their underground hive.

When a killer bee successfully stings, it dies, but the victim must save versus Poison or die. The stinger continues working deeper into the wound, causing 1 point of automatic damage each round until removed, which requires one full round.

A hive always contains at least 10 killer bees along with their queen. At least 4 of the bees have 1 Hit Die each. The queen has 2 Hit Dice and may sting repeatedly without dying. The hive is fiercely defended, and nearby bees immediately attack any threat to their queen.

Killer bee hives contain a rare golden honey prized by alchemists and healers. Thick, fragrant, and faintly warm to the touch, this potent substance heals 1d4 hit points if all the honey from a hive (about 2 pints) is consumed, functioning as a half-strength **potion of healing**.

Driver ants prize killer bee honey and will attack hives in enormous swarms. Entire forests have been stripped bare during these savage insect wars, leaving behind mounds of dead ants, shattered combs, and rivers of sticky golden honey.

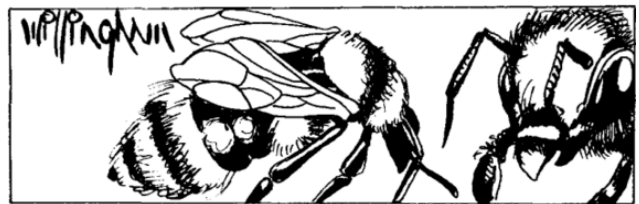

Figure 21: Basic monster illustration: killer bee

Treasure Type	Nil	Nil	U
Alignment	Neutral	Neutral	Neutral

- **Fire Beetle:** Fire beetles are 2 1/2' long creatures often found below ground. They are nocturnal, but may be active underground at any time. A fire beetle has two glowing glands above its eyes and one near the back of its abdomen. These glands give off light in a 10' radius, and will continue to glow for 1-6 days after they are removed.
- **Oil Beetle:** Oil beetles are 3' long giant beetles that sometimes burrow underground. When attacked, they will squirt an oily fluid at one of their attackers (a "to hit" roll is needed; the range is 5'). If the oil hits it will raise painful blisters, causing the victim to fight with a penalty of -2 on his or her "to hit" rolls until a **cure light wounds** spell is used or until 24 hours have passed. If the spell is used to cure blisters, it will not also cure points of damage. Oil beetles can also attack with their mandibles (horned jaws).
- **Tiger Beetle:** Tiger beetles are 4' long giant beetles with a striped carapace (a shell-like covering) which looks like a tiger's skin. They are carnivorous (meat-eaters) and usually prey on robber flies. They have been known to attack and eat humans, crushing them with their powerful mandibles.

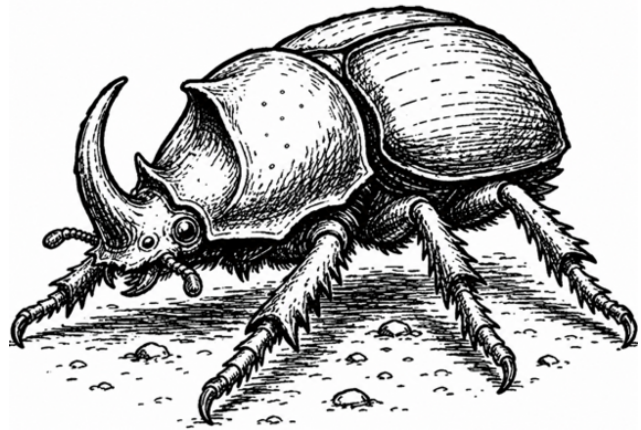

Figure 22: Basic monster illustration: giant beetle

Centipede, Giant

Source: Basic

Armor Class	9	No. Appearing	2d4 (1d8)
Hit Dice	1/2 (1d4 hp)	Save As	Normal Man
Move	60' (20')	Morale	7
Attacks	1 bite	Treasure Type	Nil
Damage	Poison	Alignment	Neutral

Giant centipedes are insects with 1' long bodies and many legs they like to live in damp, dark places. Their bite does no damage, but the victim must save vs. Poison or become violently ill for 10 days. Characters who do not save move at 1/2 speed and will not be able to perform any other physical action.

Fly, Robber

Source: Basic

Armor Class	6	No. Appearing	1d6 (2d6)
Hit Dice	2	Save As	Fighter 1
Move	90' (30')	Morale	8
Flying	180' (60')	Treasure Type	U
Attacks	1 bite	Alignment	Neutral
Damage	1d8		

Robber flies are 3' long giant flies colored with black and yellow stripes. At a distance they look like killer bees. They are not harmed by the poison of killer bees, which are their main source of food. Robber flies are patient hunters. They often hide in shadows and wait for prey, surprising on a roll of 1-4 (on 1d6). A robber fly can leap up to 30' and attack with its bite. Robber flies are meat eaters and have been known to attack humans.

Insect Swarms*Source:* Basic

Armor Class	7	No. Appearing	1 swarm (1d3 swarms)
Hit Dice	(2d4)	Save As	Normal Man
Move	30' (10')	Morale	11
Flying	60' (20')	Treasure Type	Nil
Attacks	1 swarm	Alignment	Neutral
Damage	2 points		

Insect swarms are a special type of monster. Swarms are not single creatures, but are whole communities of tiny creatures acting together. A swarm may be attracted to light, or a strange smell, or may be defending their lair. A swarm can be considered to be 10'x30' but may be larger or smaller. Some types of creatures which swarm are: ants, spiders and centipedes (crawlers), bees and wasps (flyers), and beetles and locusts (both crawlers and flyers).

If a character is within a swarm he or she is automatically hit by the.

creatures and will take 2 points of damage each round. If the character has no armor the damage will be doubled. If the character is warding the insects off (explained hereafter) or runs out of the swarm the damage will be halved. It takes 3 rounds for a character who has escaped a swarm to swat all the remaining insects.

Characters may ward off the insects by swinging a weapon or similar object around. If the object is a torch the swarm will take 1-4 points of damage. Weapons will do no damage to an insect swarm.

Swarms are affected by a sleep spell (which will affect the whole swarm), smoke (which will drive them away), and fire or extreme cold (which will damage them). The DM may choose to have other things affect swarms if he or she wishes.

If a swarm is angry (has taken damage) it will pursue characters as best as it can. A swarm may be escaped by running out of its line of sight or diving under water. If a character dives under water he or she will take damage for one more round and then all the insects on him or her will be dead.

Locust, Cave*Source:* Basic

Armor Class	4	No. Appearing	2d10 (1d10)
Hit Dice	2	Save As	Fighter 2
Move	60' (20')	Morale	5
Fly	180' (60')	Treasure Type	Nil
Attacks	1 bite or 1 bump or 1 spit	Alignment	Neutral
Damage	1d2 or 1d4 or see below		

Cave locusts are 2-3' long, stone-gray giant grasshoppers that live underground. Because of their color they may be mistaken for statues until closely approached. They are herbivorous, eat fungus such as yellow mold and shriekers, and are not harmed by yellow mold or most poisons.

They are very nervous and usually flee rather than fight, often leaping up to 60' away. Unfortunately their sense of direction is poor, and they may accidentally jump into a party; if they jump toward a group, determine a random target and make a normal attack roll, with 1-4 points of battering damage on a hit.

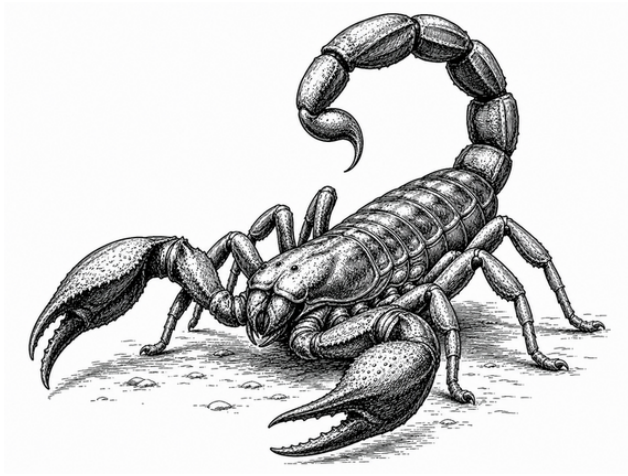

When frightened or attacked, cave locusts make a loud shrieking noise to warn their fellows. This cry has a 20% chance each round of attracting wandering monsters. If cornered, a cave locust may spit a brown gooey substance up to 10'. Treat the spit as an attack against Armor Class 9; a victim hit must save vs. Poison or be unable to act for 1 turn because of the awful smell.

Scorpion, Giant*Source:* Expert

Armor Class	2	No. Appearing	1d6 (1d6)
Hit Dice	4*	Save As	Fighter 2
Move	150' (50')	Morale	11
Attacks	2 claws / 1 sting	Treasure Type	V
Damage	1d10 / 1d10 / 1d4 + poison	Alignment	Chaotic

A giant scorpion is the size of a small horse and will usually attack on sight. It fights by grasping opponents with its claws and stinging the immobilized foe. If a claw hits, the stinger attacks at +2.

Anyone struck by the stinger must save vs. Poison or die. Giant scorpions live in deserts, caves, and ruins.

Spider, Giant

Source: Basic

Figure 23: Expert monster illustration: giant scorpion

Stat	Crab Spider	Black Widow	Tarantella	Rhagodessa

Save As	Fighter 1	Fighter: 2	Fighter 2	Fighter 2
Morale	7	8	8	9
Treasure Type	U	U	U	U
Alignment	Neutral	Neutral	Neutral	Neutral

- *Crab Spider*: Crab spiders are 5' long giant spiders. They are meat-eaters and attack their victims by clinging to walls or ceilings and dropping onto them. They have chameleon-like powers and can change their color to blend into their surroundings, surprising on a roll of 1-4 (on 1d6). After the first attack, a crab spider can be seen and attacked normally. Any victim bitten by a crab spider must save vs. Poison or die in 1d4 turns. However, the poison is weak, and the victim may add + 2 to the saving throw roll.
- *Black Widow Spider*: Black widow spiders are 6' long and colored black with a red "hourglass" mark on their abdomens. They tend to stay close to their webbed lairs. They are carnivorous and have been known to attack humans. Their webs should be treated as the magic-user's spell web, with respect to the chances of breaking free (once entrapped). The webs may also be burned away. Any victim of the bite of a black widow spider must save vs. Poison or die in 1 turn.
- *Tarantella*: A tarantella is a huge hairy magical spider which looks like a 7' long tarantula. Its bite does not kill; instead, it causes the victim (if a saving throw vs. Poison is failed) to have painful spasms which resemble a frantic thance. This thance has a magical effect on onlookers, and they may be affected. Anyone watching must save vs. Spells or start to thance in the same way. Dancing victims have a penalty of -4 on their "to hit" rolls, and attackers gain + 4 "to hit" the victim. The effects of the bite last for 2-12 turns. However, thancers will drop from exhaustion in 5 turns, and they will then be helpless against attacks. Those caught while watching will dance as long as the original victim. (In the D&D EXPERT rules, there are magical means to cure the poison, and a dispel magic spell will stop the thance.)

- *Rhagodessa*: A rhagodessa is a giant arachnid which looks like a huge hairy spider with an oversized head and jaws (mandibles). A rhagodessa is nocturnal (sleeping during the day and active at night or in the dark), and lives in caves. A rhagodessa is about the size of a small horse, colored yellow with a dark brown thorax. It has 5 pairs of legs; the front pair end in suckers which help the creature to grasp its prey. A hit with a sucker-leg does no damage but means that the victim is stuck. In the next round of combat, the victim will be pulled to the rhagodessa's mandibles and will automatically be bitten for 2d8 points of damage. Rhagodessae can climb walls, are meateaters and always hun-

gry.

Figure 24: Basic monster illustration: giant spider

Lost World

Lost World creatures are ancient beasts and monstrous survivors from forgotten ages of the world. Most dwell in hidden jungles, deep caverns, isolated valleys, subterranean realms, or other remote places untouched by civilization.

These creatures are often larger, more savage, and more primitive than their modern descendants. Encounters with Lost World monsters remind adventurers that ancient and terrible things still lurk beyond the edges of the known world.

Ape, White

Source: Basic

Armor Class	6	No. Appearing	1d6 (2d4)
Hit Dice	4	Save As	Fighter 2
Move	120' (40')	Morale	7
Attacks	2 claws	Treasure Type	Nil
Damage	1d4 x2	Alignment	Neutral

White apes are pale cave-dwelling apes that have lost their color after countless generations spent underground. They are nocturnal creatures, sleeping during the day and emerging at night to search for fruits, roots, fungi, and other edible plants.

White apes are territorial and will usually threaten intruders approaching their lairs with loud shrieks, chest beating, and stone throwing. If ignored, they attack savagely. A white ape may throw one stone per round for 1d6 points of damage.

Though not intelligent, white apes are cunning enough to defend their territory and young. Neanderthals and other primitive peoples sometimes capture and keep them as fierce guard beasts or pets.

Figure 25: Basic monster illustration: white ape

Bear, Cave

Source: Basic

Armor Class	5	No. Appearing	1d2 (1d2)
Hit Dice	7	Save As	Fighter 3
Move	120' (40')	Morale	9
Attacks	2 claws/1 bite	Treasure Type	V
Damage	1d4x2/1d8	Alignment	Neutral

Cave bears are gigantic prehistoric bears found in deep caverns, isolated valleys, and lost world regions untouched by civilization. Standing nearly 15' tall when rearing, they are among the largest and most dangerous natural predators known. Their shaggy fur ranges from dark brown to pale gray, and their enormous claws can tear through bone and wood with ease.

Though omnivorous, cave bears strongly prefer meat and are infamous for developing a taste for human flesh. Their eyesight is poor, but their sense of smell is extraordinarily keen, allowing them to follow blood trails for miles through darkness or wilderness. Cave bears are notoriously ill-tempered and will often continue fighting long after suffering terrible wounds.

If a cave bear hits the same target with both claw attacks in one combat round, it also hugs its victim for an additional 2d8 points of damage.

Mastodon

Source: Expert

Armor Class	3	No. Appearing	0 (2d8)
Hit Dice	15	Save As	Fighter 8
Move	120' (40')	Morale	8
Attacks	2 tusks or 1 trample	Treasure Type	See below
Damage	2d6 / 2d6 or 4d8	Alignment	Neutral

Mastodons look like hairy elephants with long tusks. In combat, a mastodon will charge, striking only with its tusks for double damage. In succeeding rounds, it will either strike with its tusks, 25%, or trample, 75%, if the opponent is man-sized or smaller. The mastodon gains a bonus of +4 on "to hit" rolls when trampling any creature man-sized or smaller.

Ivory mastodon tusks are quite valuable, each tusk being worth 200-800 gp. They live in cold, icy tundras or "lost worlds."

Neanderthal (Caveman)

Source: Basic

Armor Class	8	No. Appearing	1d10 (10d4)
Hit Dice	2	Save As	Fighter 2
Move	120' (40')	Morale	7
Attacks	1 weapon	Treasure Type	C
Damage	2d8 or weapon + 1	Alignment	Lawful

Neanderthals, also known as cavemen, are a demi-human species related to humans. They have squat bodies with large bones and powerful muscles. Their faces have apelike features, including large brows above the eyes. Neanderthals live in family groups in caves and caverns.

Neanderthals usually attack with thrown spears and use stone axes, clubs, or stone hammers in hand-to-hand combat. They choose their leaders from a similar race that is much larger than the average Neanderthal. These leaders have 6 hit dice and are 10' tall. There will be 10-40 Neanderthals in the lair with 2 leaders, one male and one female. Neanderthals often hunt cave bears and keep white apes as pets. They are friendly toward dwarves and gnomes, but hate goblins and kobolds. They will attack ogres on sight. They are shy and will avoid humans, but are not usually hostile unless they are attacked.

Pterodactyl

Source: Expert

Stat	Pterodactyl	Pteranodon
Armor Class	7	6
Hit Dice	1	5
Flying	180' (60')	240' (120')
Attacks	1	1
Damage	1d3	1d12
No. Appearing	0 (2d4)	0 (1d4)
Save As	Fighter 1	Fighter 3
Morale	7	8
Treasure Type	Nil	V
Alignment	Neutral	Neutral

Pterodactyls are bat-like reptiles with wingspans of 8-10 feet. They hunt small and medium-sized animals, gliding slowly along air currents to spot their prey. If driven by great hunger they will attack human-sized creatures.

Pteranodons are giant pterodactyls. They are more aggressive and will often attack humans or humanoids. These monsters can have a wingspan of up to 50 feet.

Pteranodons and pterodactyls are only found in warm climates, usually in "lost world" areas.

Rhinoceros, Woolly

Source: Expert

Armor Class	4	No. Appearing	0 (1d8)
Hit Dice	8	Save As	Fighter 4
Move	120' (40')	Morale	6
Attacks	butt or trample	Treasure Type	Nil
Damage	2d6 or 2d12	Alignment	Neutral

Woolly rhinoceroses are covered in long white or gray fur and roam cold plains, windswept tundra, and frozen valleys in small herds. These massive beasts are heavily built, bad-tempered, and surprisingly swift when angered. Their thick hides and dense coats protect them from even the harshest climates.

If threatened, surprised, or charged, a rhinoceros will stampede in a random direction, goring anything in its path and inflicting double damage with its first successful attack.

Woolly rhinos are most often encountered in isolated "lost world" regions where ancient creatures still survive from forgotten ages. Primitive tribes sometimes hunt them for meat, horn, hide, and bone, though doing so is extremely dangerous.

Sabre-Tooth Tiger

Source: Basic

Armor Class	6	No. Appearing	1d4 (1d4)
Hit Dice	8	Save As	Fighter 4
Move	150' (50')	Morale	10
Attacks	2 claws / 1 bite	Treasure Type	V
Damage	1d8 / 1d8 / 2d8	Alignment	Neutral

Sabre-tooth tigers are enormous prehistoric predators found in lost world jungles, isolated valleys, and ancient wilderness untouched by civilization. They are heavily built cats with shaggy fur, massive shoulders, and terrifying curved fangs nearly a foot long.

Unlike most Great Cats, sabre-tooth tigers are aggressive and fearless hunters that readily attack large prey, including humans, mammoths, and dinosaurs. They prefer ambushes from tall grass, rocky cover, or dense jungle growth, surprising prey on a roll of 1-4 on 1d6.

A sabre-tooth tiger that hits the same target with both claw attacks in one combat round also tears with its great fangs for an additional 2-8 points of damage.

Figure 26: Basic monster illustration: sabretooth tiger

Stegosaurus

Source: Expert

Armor Class	3	No. Appearing	0 (1d4)
Hit Dice	11	Save As	Fighter 6
Move	60' (20')	Morale	7
Attacks	tail or trample	Treasure Type	Nil
Damage	2d8 or 2d8	Alignment	Neutral

These squat dinosaurs have hard upright plates of bone along their backs and 4 long spikes on the end of their tails. They will swing their tail at anything that menaces them. Stegosaurus are herbivores and prefer sub-tropical conditions. They are usually found only in "lost world" areas.

Titanotheres

Source: Expert

Armor Class	5	No. Appearing	0 (1d6)
Hit Dice	12	Save As	Fighter 6
Move	120' (40')	Morale	7
Attacks	butt or trample	Treasure Type	Nil
Damage	2d6 or 3d8	Alignment	Neutral

The prehistoric titanotheres resembles a huge blunt-horned rhino, 12' tall at the shoulder. They are generally peaceful if left alone, preferring to graze grass and eat leaves off trees. In combat, titanotheres will butt or trample their opponents. Small herds of these creatures are found in the grasslands of "lost world" areas.

Triceratops

Source: Expert

Armor Class	2	No. Appearing	0 (1d4)
Hit Dice	11	Save As	Fighter 6
Move	90' (d0')	Morale	8
Attacks	gore or trample	Treasure Type	Nil
Damage	3d6 each	Alignment	Neutral

A triceratops is a heavily muscled, four-legged dinosaur that stands about 12' high at the shoulder and is nearly 40' long. It has three horns protruding from the bony protective crest that covers its head. Although these creatures are plant eaters, they are aggressive and dangerous, usually attacking on sight. They charge for double damage on the first attack.

Triceratops are found on the plains of "lost worlds."

Tyrannosaurus Rex

Source: Expert

Armor Class	3	No. Appearing	0 (1)
Hit Dice	20	Save As	Fighter 10
Move	120' (40')	Morale	11
Attacks	1 bite	Treasure Type	V (x3)
Damage	6d6	Alignment	Neutral

The tyrannosaurus rex is one of the largest hunting dinosaurs, standing over 20' tall. Its great jaws are lined with sharp teeth and it moves erect on its hind legs. It will attack anything man-sized or larger, usually attacking the largest creature first.

The tyrannosaurus rex is usually found only in "lost world" areas.

Lycanthropes

Lycanthropes are humans who can transform into beasts, or in the case of wererats, beasts that can transform into humans. They normally change shape at night, and a full moon has a 90% chance of causing an involuntary transformation. Lycanthropes do not wear armor, as it interferes with their shapechanging abilities. All lycanthropes revert to human form when killed. Horses and some other animals can smell lycanthropes and often react in fear.

Human Form: In human form, a lycanthrope usually shows physical traits reminiscent of its animal form. It may speak normally and use weapons and equipment as any human would. Armor Class values given in parentheses apply in human form.

Animal Form: In animal form, a lycanthrope may only be harmed by silver weapons, magic weapons, or magic spells. It cannot speak normal languages, but may communicate with animals of its own kind.

Languages: Each type of lycanthrope has its own language and may summon 1-2 normal animals of its associated type from the surrounding area (wererats summon giant rats instead). These creatures arrive in 1d4 rounds.

Wolfsbane: If struck by wolfsbane, a lycanthrope must save versus Poison or flee in terror. Wolfsbane must be used as a thrown or melee weapon following normal combat rules.

Lycanthropy: Lycanthropy is a magical disease. Any humanoid reduced to half its hit points or fewer by a lycanthrope's natural attacks (bites or claws) contracts lycanthropy if it survives. Symptoms appear after 1d12 days, and the transformation becomes complete after 2d12 days. Humans become lycanthropes of the same type, usually falling under the DM's control thereafter. Non-humans usually die from the disease rather than transforming.

A **cure disease** spell cast by a cleric of 11th level or higher can remove lycanthropy if cast within three days of the attack. Drinking belladonna within one hour of the attack gives a 25% chance to cure the disease, but incapacitates the victim for 1d4 days and carries a 1% chance of death.

The six most common types of lycanthropes are described below.

Devil Swine*

Source: Expert

Armor Class	3 (9)	No. Appearing	1d3 (1d4)
Hit Dice	9*	Save As	Fighter 9
Move	180' (60')	Morale	10
Human	120' (40')	Treasure Type	C
Attacks	1 gore (or blow)	Alignment	Chaotic
Damage	2d6 (or by weapon)		

Devil swine are vile lycanthropes and shape-changers that haunt the edges of isolated human settlements, especially those near deep forests, marshes, and swamps. Carnivorous and cruel, they possess an insatiable hunger for human flesh. By night, a devil swine may freely shift between the form of a massive boar and that of a bloated, brutish human. At dawn, however, it becomes trapped in its current shape until dusk returns. Like other lycanthropes, devil swine can only be harmed by silver or magical weapons.

Devil swine possess a powerful **charm person** ability that may be used three times every 24 hours, regardless of their current form. Victims may save vs. Spells at a -2 penalty to resist its influence. Charmed victims lose the ability to use spells or magical devices and become obedient servants to the creature. Each devil swine may control up to 0-3 humans at a time.

Cunning and patient hunters, devil swine prefer ambushes, deception, and nighttime attacks over open battle.

Figure 27: Devil Swine

Werebear*

Source: Basic

Armor Class	2 (8)	No. Appearing	1d4 (1d4)
Hit Dice	6*	Save As	Fighter 6
Move	120' (40')	Morale	10
Attacks	2 claws / 1 bite	Treasure Type	C
Damage	2d4x2 / 2d8	Alignment	Neutral

In human form, a werebear appears as a large, hairy, solitary human. Werebears are highly intelligent, even in animal form, and are often peaceful if approached without hostility. They usually live alone or among normal bears.

In bear form, a werebear is 50% likely to be accompanied by 1d6 brown bears. It may also summon 1d6 brown bears within one mile, arriving in 2d6 turns.

In combat, if both claw attacks hit the same target in one round, the werebear also hugs for an additional 2-16 points of damage. Werebears are immune to disease, heal three times faster than normal, and may cure disease in another creature within 1d4 weeks.

Wereboar*

Source: Basic

Armor Class	4 (9)	No. Appearing	1d4 (2d4)
Hit Dice	4 + 1*	Save As	Fighter 4
Move	150' (50')	Morale	9
Attacks	1 tusk	Treasure Type	C
Damage	2d6	Alignment	Neutral

A wereboar is a foul-tempered, semi-intelligent lycanthrope usually found in heavily wooded areas. In human form, wereboars often resemble savage berserkers and fight with the same reckless fury in battle. When enraged, a wereboar gains a +2 bonus on attack rolls and fights to the death. There is a 15% chance a wereboar will be accompanied by 1d4 normal boars, which it can direct to attack alongside it.

Figure 28: Wereboar

Wererat*

Source: Basic

Armor Class	7 (9)	No. Appearing	1d8 (2d8)
Hit Dice	5*	Save As	Fighter 3
Move	120' (40')	Morale	8
Attacks	1 bite or weapon	Treasure Type	C
Damage	1d4 or by weapon	Alignment	Chaotic

Wererats are intelligent, stealthy lycanthropes that infest sewers, catacombs, and other underground places beneath large cities. They can speak Common in any form and may assume three shapes: human, giant rat, or man-rat. Most prefer the man-rat form.

They are cunning ambushers, surprising opponents on a roll of 1-4 on 1d6. In human or man-rat form they often use swords and other weapons, preferring traps, kidnappings, and ambushes over open battle.

A wererat may summon and control 2d6 giant rats to aid it in combat. Only a wererat's bite can spread lycanthropy.

Rumors speak of hidden colonies of black wererats ruled by sinister leaders and moon-mad sorcerers. Fearful tales claim entire ratfolk kingdoms lie beneath ancient cities, lit by sickly green fires and ruled by masked wererat kings attended by enormous sacred rats. Some legends say they plot to one day overwhelm the surface world in a tide of fur, fang, and plague.

Weretiger*

Source: Basic

Armor Class	3 (9)	No. Appearing	1d4 (1d4)
Hit Dice	5*	Save As	Fighter 5
Move	150' (50')	Morale	9
Attacks	2 claws / 1 bite	Treasure Type	C
Damage	1d6x2 / 2d6	Alignment	Neutral

These relatives of the great cats are curious and graceful hunters, but become deadly when threatened. Most weretigers are female and live much like normal tigers, though they rarely associate with ordinary tigers except 5% of the time.

They are excellent swimmers and silent trackers, surprising opponents on a roll of 1-4 on 1d6. In combat, they can rake with their rear claws like a normal tiger. They may also summon any type of great cat in the area, though they prefer tigers.

Due to their ability to speak with felines, normal cats are 75% likely to react favorably toward a weretiger.

Figure 29: Weretiger

Werewolf*

Source: Basic

Armor Class	5 (9)	No. Appearing	1d6 (2d6)
Hit Dice	4*	Save As	Fighter 4
Move	180' (60')	Morale	8
Attacks	1 bite	Treasure Type	C
Damage	2d4	Alignment	Chaotic

Werewolves are semi-intelligent lycanthropes that usually hunt in packs. In wolf form they often move upright on their hind legs, giving them a terrifying, unnatural appearance.

A pack of 5-8 werewolves is usually a family group consisting of a male, female, and 3-6 younger werewolves ranging from 60%-90% maturity. The male fights at +2 to attack and deals full damage if the female is threatened. The female attacks at +3 to hit and deals full damage if her cubs are endangered.

Young werewolves attack at penalties ranging from -4 to -1, depending on maturity, and inflict 1d4+1 damage.

Any group of 5 or more adult werewolves will also have a leader with 30 hit points who attacks as a 5 Hit Dice monster and gains +2 on damage rolls.

Werewolves may summon normal wolves to form larger hunting packs.

Figure 30: Werewolf

Monstrous

Basilisk

Source: Expert

Armor Class	4	No. Appearing	1d6 (1d6)
Hit Dice	6 + 1**	Save As	Fighter 6
Move	60' (20')	Morale	9
Attacks	1 bite + gaze	Treasure Type	F
Damage	1d10 + petrification	Alignment	Neutral

A basilisk is a 10' long, sinuous magical lizard that is non-intelligent. It lives in underground caverns or wild and tangled thickets.

Creatures touched by a basilisk, or meeting its gaze, must make a saving throw vs. Turn to Stone or be petrified (including all the character wears and holds). Surprised characters automatically meet the gaze of a basilisk. Characters in hand-to-hand combat with a basilisk meet its glance each round unless looking away.

Characters looking away to avoid the gaze of a basilisk must fight it with a penalty of -4 on their "to hit" rolls, while the basilisk attacks at +2. The beast can be safely viewed in a mirror, and characters who fight it while looking into a mirror will only have a -1 penalty on their "to hit" rolls. If the basilisk sees itself in a mirror (a 1d6 roll of 1 or 2), it must make a saving throw or be turned to stone! There must be light close by for mirrors to be used, and using a mirror prevents the effective use of a shield.

Figure 31: Basilisk

Black Pudding*

Source: Expert

Armor Class	6	No. Appearing	1 (0)
Hit Dice	10*	Save As	Fighter 5
Move	60' (20')	Morale	12
Attacks	1	Treasure Type	Nil
Damage	3d8	Alignment	Neutral

A black pudding is a black amorphous blob 5'-30' in diameter. It is non-intelligent, constantly hungry, and moves silently through dark places in search of prey.

It can dissolve wood and corrode metal in one turn, but cannot affect stone. Ancient dungeons often bear long black scars where a pudding has slowly passed. The air around a black pudding is damp and foul, carrying the stench of rot and corrosion.

Black puddings can travel on ceilings and walls and can pass through small openings. They instinctively avoid bright light and often lurk in forgotten tunnels, wells, and dungeon cisterns.

They can be killed only by fire; other attacks (weapons or spells) merely break them into smaller puddings (a 2 hit dice pudding that does 1-8 points of damage is created per blow). A **flaming sword** will do normal damage.

Figure 32: Black Pudding

Blink Dog

Source: Expert

Armor Class	5	No. Appearing	1d6 (1d6)
Hit Dice	4*	Save As	Fighter 4
Move	120' (40')	Morale	6
Attacks	1 bite	Treasure Type	C
Damage	1d6	Alignment	Lawful

Blink dogs resemble lean wild dogs with pale coats and bright, alert eyes. Fiercely social creatures, they travel and hunt in packs. Blink dogs are nearly as clever as humans, possess a

complex spoken language of their own, and can understand Elvish. Their unique ability allows them to instantly teleport, or “blink,” from one location to another.

In combat, blink dogs “blink” beside an enemy, strike, and then reappear 10’–40’ away. On any round in which they win initiative, they may attack and vanish again before a defender can retaliate. Their natural instincts prevent them from “blinking” into solid objects or other dangerous spaces.

If badly threatened, an entire pack may “blink” away and not return. Blink dogs are the natural enemies of displacer beasts and will attack them on sight.

Figure 33: Blink Dog

Caecilia

Source: Expert

Armor Class	6	No. Appearing	1d3 (1d3)
Hit Dice	6*	Save As	Fighter 3
Move	60' (20')	Morale	9
Attacks	1 bite	Treasure Type	B
Damage	1d8	Alignment	Neutral

These giant gray wormlike creatures are about 30' long. They attack with their cavernous mouths and sharp teeth. An unadjusted “to hit” roll of 19 or 20 means that they have swallowed their prey whole. The victim will take 1-8 points of damage each round after that until either the victim or the caecilia is dead. Any attack from inside a caecilia may only be made with a dagger, and with a penalty of -4 on “to hit” rolls.

Carriion Crawler

Source: Basic

Armor Class	7	No. Appearing	1d3 (1d3)
Hit Dice	3 + 1*	Save As	Fighter 2
Move	120' (40')	Morale	9
Attacks	8 tentacles	Treasure Type	B
Damage	Paralysis	Alignment	Neutral

This scavenger is a worm-like creature about 9' long and 3' high, with dozens of small legs that allow it to move with ease across floors, walls, and ceilings like a giant spider. Its maw is ringed with eight 2' long tentacles that can paralyze a victim on a successful hit unless a saving throw vs. Paralysis is made.

Once a victim is paralyzed, the carrion crawler will begin feeding unless driven off or attacked. A **cure light wounds** spell will remove the paralysis, though the spell has no other effect when used in this way.

Without magical aid, the paralysis wears off naturally in 2–8 turns.

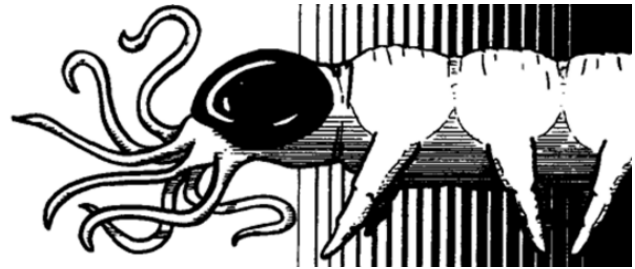

Figure 34: Carrion Crawler

Chimera

Source: Expert

Armor Class	4	No. Appearing	1d2 (1d4)
Hit Dice	9**	Save As	Fighter 9
Move	120' (40')	Morale	9
Flying	180' (60')	Treasure Type	F
Attacks	special	Alignment	Chaotic
Damage	special		

A chimera is a monstrous fusion of three different creatures. It has the three heads of a goat, lion, and dragon; the forebody of a great lion; the hindquarters of a goat; and the scaled wings of a dragon. Each head attacks independently:

- **goat head** gores with its horns for 2d4
- **lion head** tears with its fangs for 2d4
- **dragon head** can either bite for 3d4 or breathe fire.

The dragon's fiery breath forms a 50' long cone,

10' wide at its furthest point, inflicting 3d6 points of damage on all caught within it. Like a true dragon, the dragon head will breathe fire 50% of the time and bite 50% of the time when attacking. However, its breath weapon can only be used three times per day.

The Chimera also has 2 claw attack for 1d3

In total: 2 × claw (1d3), goat: 1 × gore (2d4), lion: 1 × bite (2d4), dragon: 1 × bite (3d4) or 1 × breath (3d6)

Chimeras are savage, ill-tempered predators most often found in wild hills, rocky badlands, and remote mountain regions, though they sometimes lair in deep dungeons or ruined strongholds.

Figure 35: Chimera

Cockatrice

Source: Expert

Armor Class	6	No. Appearing	1d4 (1d8)
Hit Dice	5**	Save As	Fighter 5
Move	90' (30')	Morale	7
Flying	180' (60')	Treasure Type	D
Attacks	1 beak + special	Alignment	Neutral
Damage	1d6 + petrification		

This is a small, magical monster with the head, wings, and legs of a rooster and the tail of a serpent. It is able to strike with its beak for 1-6 points of damage. However, its small size and single attack disguises its greatest danger: any character touched by a cockatrice must make a saving throw or be turned to stone.

Cockatrices may be found anywhere.

Figure 36: Cockatrice

Displacer Beast

Source: Expert

Armor Class	4	No. Appearing	1d4 (1d4)
Hit Dice	6*	Save As	Fighter 6
Move	150' (50')	Morale	8
Attacks	2 tentacles	Treasure Type	D
Damage	2d4 / 2d4	Alignment	Neutral

A displacer beast resembles a great black panther with six powerful legs and a pair of long tentacles sprouting from its shoulders. Each tentacle ends in sharp, horn-like ridges that slash and tear at nearby prey.

The creature's most feared ability is its constant distortion of light and space. A displacer beast always appears to be about 3' from its true position, making it extremely difficult to strike. Any creature attacking a displacer beast suffers a -2 penalty on all "to hit" rolls against it, and the beast gains a +2 bonus on all saving throws.

Displacer beasts possess a cruel, predatory cunning and delight in stalking intelligent prey. They harbor an instinctive hatred and fear of blink dogs, attacking them and any creatures traveling with them on sight.

Figure 37: Expert monster illustration: displacer beast

Doppelganger

Source: Basic

Armor Class	5	No. Appearing	1d6 (1d6)
Hit Dice	4*	Save As	Fighter 10
Move	90' (30')	Morale	10
Attacks	1	Treasure Type	E
Damage	1d12	Alignment	Chaotic

Doppelgangers are evil, shape-changing creatures roughly the size of a human. Cunning and highly intelligent, they delight in deception, betrayal, and murder.

A doppelganger can assume the exact appearance of any human-like creature up to 7' tall that it has seen. Once it adopts a victim's form, it will usually attempt to kill the original secretly and take its place without the victim's companions realizing the substitution. A doppelganger often waits until the party is distracted, resting, or engaged in battle before striking by surprise from within their ranks.

Due to their magical nature, doppelgangers are immune to **sleep** and **charm** spells and save as 10th level Fighter.

When slain, a doppelganger immediately reverts to its true form.

Gelatinous Cube

Source: Basic

Armor Class	8	No. Appearing	1 (0)
Hit Dice	4*	Save As	Fighter 2
Move	60' (20')	Morale	12
Attacks	1	Treasure Type	V
Damage	2d4 + special	Alignment	Neutral

These are made of a clear jelly and are shaped like cubes about 10' on a side. Due to their near transparency, they surprise on a roll of 1-4 (1d6). They move through the rooms and corridors of dungeons, sweeping the halls clean of all living and dead material. In the process, they may pick up items they can't dissolve (such as gold pieces and gems). Though they usually eat carrion, they will attack any living creature they encounter, inflicting 2d4 points of damage. Each successful hit will paralyze the victim unless a saving throw versus Paralysis is made. Any attacks on a paralyzed victim will automatically hit (only a damage roll is needed). This paralysis is the normal type (lasting 2-8 turns unless removed by a cure light wounds spell). A gelatinous cube may be harmed by fire and weapons, but not by cold or lightning.

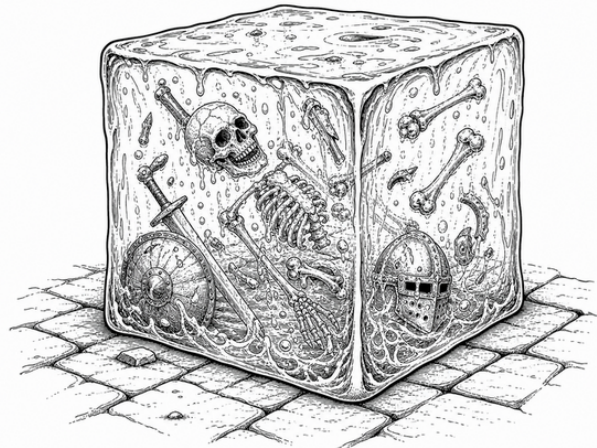

Figure 38: Gelatinous Cube

Gorgon

Source: Expert

Armor Class	2	No. Appearing	1d2 (1d4)
Hit Dice	8*	Save As	Fighter 8
Move	120' (40')	Morale	8
Attacks	1 gore or breath	Treasure Type	E
Damage	2d6 or petrification	Alignment	Chaotic

A gorgon is a magical bull-like monster covered with large iron scales. It gores opponents with its

great horns and will do double damage if it hits when charging. A gorgon also breathes clouds of vapor that will petrify any opponents who fail their saving throw vs. Turn to Stone.

A gorgon's vapor cloud is 60' long by 10' wide. They are impervious to their own breath weapon. Gorgons are usually found in foothills or grasslands.

Gray Ooze

Source: Basic

Armor Class	8	No. Appearing	1 (1)
Hit Dice	3*	Save As	Fighter 2
Move	10' (3')	Morale	12
Attacks	1	Treasure Type	Nil
Damage	2d8	Alignment	Neutral

This seeping horror looks like wet stone and is difficult to see. It secretes an acid which does 2d8 points of damage if the gray ooze hits bare skin. This acid will dissolve and destroy magic armor in one turn. After the first hit, the ooze will stick to its victim, automatically destroying any normal armor and doing 2d8 points of damage each round. Gray ooze cannot be harmed by cold or fire, but can be harmed by weapons and lightning.

Green Slime*

Source: Basic

Armor Class	Can always be hit	No. Appearing	1 (0)
Hit Dice	2*	Save As	Fighter 1
Move	3' (1')	Morale	12
Attacks	1	Treasure Type	Nil
Damage	See below	Alignment	Neutral

Green slime looks like green, oozing slime. This creature can be harmed by fire or cold but cannot be hurt by any other attacks. It dissolves wood and metal in 6 rounds, but cannot dissolve stone.

Green slime often clings to walls and ceilings and will drop down on surprised characters. Once in contact with flesh, it will stick and turn the flesh into green slime. It cannot be scraped off, but must be burnt off, or treated with a cure disease spell.

When green slime drops on a victim, or is stepped on, the victim can usually burn it while it is dissolving armor and clothing. If it is not burned off, the victim will turn completely into green slime 1-4 rounds after the first 6-round, one-minute period. Burning does 1/2 damage to the green slime and 1/2 damage to the victim.

Griffon

Source: Expert

Armor Class	5	No. Appearing	0 (2d8)
Hit Dice	7	Save As	Fighter 4
Move	120' (40')	Morale	8
Flying	360' (120')	Treasure Type	E
Attacks	2 claws / 1 bite	Alignment	Neutral
Damage	1d4 / 1d4 / 2d8		

A griffon is a large monster with the head, wings, and front claws of an eagle and the body and hindquarters of a lion. It is a voracious predator. Its favorite prey is horses. When within 120' of horses a griffon must pass a morale check or attack immediately.

Wild griffons will attack any who approach their nests. If captured young, they can be tamed to become fierce, loyal mounts, with training left to the DM's discretion. Tamed griffons are still likely to attack horses, however, and must check morale as above.

Figure 39: Griffon

Harpy

Source: Basic

Armor Class	7	No. Appearing	1d6 (2d4)
Hit Dice	3*	Save As	Fighter 3
Move	60' (20')	Morale	7
Flying	150' (50')	Treasure Type	C weapon + special
Attacks	2 claws / 1	Alignment	Chaotic + special
Damage	1d4 / 1d4 / 1d6		

A harpy has the lower body of a giant eagle and the upper body and head of a hideous-looking woman. By their singing, harpies lure creatures to them, to be killed and devoured. Any creature hearing the harpy's song must save vs. Spells or be charmed (see special attacks at the beginning of the section).

Charmed individuals will move toward the harpies, resisting any attempt to stop them, but not otherwise attacking. If a character saves against the songs of a group of harpies, the character will not be affected by any of their songs during the encounter. Harpies are resistant to magic and have a + 2 on all their saves.

Figure 40: Harpy

Hellhound

Source: Expert

Armor Class	4	No. Appearing	2d4 (2d4)
Hit Dice	3-7*	Save As	Variable
Move	120' (40')	Morale	9
Attacks	Bite or breath	Treasure Type	C
Damage	1d6 or special	Alignment	Chaotic

A hellhound appears as a reddish-brown hound the size of a large wolfhound or small pony, and is impervious to normal fire. They are often found near volcanos, deep in dungeons, or with another fire-loving creature such as a fire giant. Hellhounds are cunning and highly intelligent. They save as a fighter level equal to their hit dice.

In melee, a hellhound will attack one person, biting, 3-6 on 1d6, or breathing fire, 1 or 2 on 1d6, each round. Its breath does 1d6 points of damage for each hit die the hellhound has, 3d6 to 7d6. A character who makes a saving throw vs. Dragon Breath takes only half damage.

Hellhounds have a 75% chance per round of detecting an invisible person or object within 60'. They save as a fighter of equal hit dice.

Hippogriff

Source: Expert

Armor Class	5	No. Appearing	0 (2d8)
Hit Dice	3 + 1	Save As	Fighter 2
Move	180' (60')	Morale	8
Flying	360' (120')	Treasure Type	Nil
Attacks	2 claws / 1 bite	Alignment	Neutral
Damage	1d6 / 1d6 / 1d10		

A hippogriff is a fantastic creature with the foreparts and head of a giant eagle and the hindquarters of a horse. Hippogriffs can be ridden if tamed. They usually attack pegasi, their natural enemies, and nest in rocky crags.

Figure 41: Hippogriff

Hydra

Source: Expert

Armor Class	5	No. Appearing	1 (1)
Hit Dice	5-12	Save As	Fighter (see below)
Move	120' (40')	Morale	9
Attacks	5-12 (see below)	Treasure Type	B
Damage	1d10 per head	Alignment	Neutral

A hydra is a large creature with a dragon-like body and 5 to 12, 1d8 + 4, serpentine heads. It has one hit die for each head, and always has 8 hit points per hit die. A hydra will attack with all of its heads each round. For every 8 points of damage a hydra takes, one head will no longer attack. Example: if a 7-headed hydra took 18 points of damage, it would only attack with 5 heads in the next round. A hydra saves as a fighter of a level equal to its number of heads.

Sea hydras have adapted to water. They possess fins instead of legs. They are otherwise the same as their land-dwelling cousins.

The DM may wish to create special versions of hydra. Special hydras could have poisonous bites or breathe fire, as a dragon, but with a 5' range and only causing 8 points of damage per head. Such creatures should be placed by the DM to guard special treasures.

Figure 42: Hydra

Invisible Stalker

Source: Expert

Armor Class	3	No. Appearing	1 (1)
Hit Dice	8*	Save As	Fighter 8
Move	120' (40')	Morale	12
Attacks	1	Treasure Type	Nil
Damage	4d4	Alignment	Neutral

An invisible stalker is a very intelligent enchanted monster summoned to this world by use of the invisible stalker magic-user's spell. If the stalker is given a simple task that is clear and can be swiftly completed, it will obey promptly. If the task is complex or lengthy, the invisible stalker will try to distort the intent while obeying the literal command. Example: if ordered to guard a treasure for longer than a week, the stalker may take it away to its native plane of existence and guard it there forever.

Invisible stalkers are most often used to track and slay enemies. They are faultless trackers. They surprise any creature that cannot detect invisible creatures on a 1d6 roll of 1-5. They will return to their native plane once they are slain, dispelled, or have completed their task.

Manticore

Source: Expert

Armor Class	4	No. Appearing	1d2 (1d4)
Hit Dice	6 + 1	Save As	Fighter 6
Move	120' (40')	Morale	9
Flying Attacks	180' (60')	Treasure Type	D
Attacks	2 claws / 1 bite or spikes	Alignment	Chaotic
Damage	1d4 / 1d4 / 2d4 or special		

A manticore is a horrid monster having a man's face, the body of a lion, leathery bat wings, and a tail ridged with spikes. The manticore has 24 spikes and can shoot 6 each round even when fly-

ing. The tail spikes have a 180' range and each do 1-6 points of damage. The creature will regrow 2 spikes per day.

The manticore's favorite food is man. They usually live in wild mountain ranges. They will frequently track parties with humans, ambushing with spike attacks when the party stops to rest.

Figure 43: Manticore

Medusa

Source: Basic

Armor Class	8	No. Appearing	1d3 (1d4)
Hit Dice	4*	Save As	Fighter 4
Move	90' (30')	Morale	8
Attacks	1 snakebite +	Treasure Type	F special
Damage	1d6 + poison	Alignment	Chaotic

A medusa looks like a human female with live snakes growing from her head instead of hair. The sight of a medusa will turn a creature to stone unless the victim saves vs. Turn to Stone. The bite of the snakes is poisonous (save vs. Poison or die in one turn) and when they hit they will do a total of 1-6 (1d6) points of damage. The group of snakes may only attack once per round. A medusa will often wear a robe with a hood for disguise in order to trick its victims into looking at it. A medusa can be looked at without harm by looking at its reflection in a mirror. If a medusa sees its own reflection, it must save vs. Turn to Stone or it will petrify itself!

Anyone who tries to attack a medusa without looking at it must subtract 4 from all "to hit" rolls, and the medusa may attack with a bonus of +2 on its "to hit" rolls. A medusa also gains +2 on saves vs. Spells due to her magical nature.

Figure 44: Medusa

Mermen

Source: Expert

Armor Class	6	No. Appearing	0 (1d20)
Hit Dice	1-4	Save As	Fighter 1
Move	120' (40')	Morale	8
Attacks	1	Treasure Type	A
Damage	1d6 or by weapon	Alignment	Neutral

Mermen have the upper bodies of men and the lower bodies of large fish. They are armed with spears, tridents (treat as spears), or daggers. They live in coastal waters and hunt fish and harvest kelp.

All mermen except leaders have 1 hit die and save as 1st level fighters. The number appearing represents a small hunting party, although mermen will often form underwater villages of 100 to 300 creatures. For every 10 mermen encountered there will be a leader with 2 hit dice. For every 50 there will be one leader with 4 hit dice. Mermen leaders save as fighters with the same amount of hit dice.

Mermen often keep trained marine animals and monsters to help guard their homes.

Minotaur

Source: Basic

Armor Class	6	No. Appearing	1d6 (1d8)
Hit Dice	6	Save As	Fighter 6
Move	120' (40')	Morale	12
Attacks	1 gore / 1 bite or weapon	Treasure Type	C
Damage	1d6 / 1d6 or weapon	Alignment	Chaotic e

A minotaur is a large man with the head of a bull. It is larger than human size, and eats humans. A minotaur will always attack anything its size or smaller and will pursue as long as its prey is in sight.

Minotaurs are semi-intelligent and some use weapons, preferring a spear, club, or axe. Minotaurs gain +2 to damage done with a weapon due to their strength. If a minotaur uses a weapon,

it may not gore or bite. Minotaurs usually live in tunnels or mazes.

Figure 45: Minotaur

Ochre Jelly

Source: Basic

Armor Class	8	No. Appearing	1 (0)
Hit Dice	5*	Save As	Fighter 3
Move	30' (10')	Morale	12
Attacks	1	Treasure Type	Nil
Damage	2d6	Alignment	Neutral

An ochre jelly is an ochre-colored giant amoeba which can only be harmed by fire or cold. Attacks with weapons or lightning merely make several (1d4+ 1) smaller (2 hit dice) ochre jellies. An ochre jelly does 2d6 damage per turn to exposed flesh. The smaller ochre jellies only do half damage. It can seep through small cracks, and destroy wood, leather, and cloth in 1 round, but cannot eat through metal or stone.

Owl Bear

Source: Basic

Armor Class	5	No. Appearing	1d4 (1d4)
Hit Dice	5	Save As	Fighter 3
Move	120' (40')	Morale	9
Attacks	2 claws / 1 bite	Treasure Type	C
Damage	1d8 each	Alignment	Neutral

An owl bear is a huge bear-like creature with the head of a giant owl. An owl bear stands 8' tall

and weighs 1500 pounds (15,000 coins). Owl bears have nasty tempers and are usually hungry, preferring meat. If both paws of an owl bear hit the same opponent in one round, the owl bear will "hug" for an additional 2d8 points of damage. They are commonly found underground and in dense forests.

Figure 46: Owl Bear

Pegasus

Source: Expert

Armor Class	6	No. Appearing	0 (1d12)
Hit Dice	2 + 2	Save As	Fighter 2
Move	240' (80')	Morale	8
Flying	480' (160')	Treasure Type	Nil
Attacks	2 hooves	Alignment	Lawful
Damage	1d6 / 1d6		

These semi-intelligent flying horses are wild and shy. They cannot be tamed, but will serve Lawful characters only if captured when young and trained. Pegasi are the natural enemies of hippogriffs.

Figure 47: Pegasus

Purple Worm*Source:* Expert

Armor Class	6	No. Appearing	1d2 (1d4)
Hit Dice	15*	Save As	Fighter 8
Move	60' (20')	Morale	10
Attacks	1 bite / 1 sting	Treasure Type	D
Damage	2d8 / 1d8 + poison	Alignment	Neutral

Purple worms are huge, slime-covered creatures over 100' long and 8' to 10' in diameter. These tunnel through the earth, burrowing up from the ground to feed on surface-dwelling creatures. They attack by biting and stinging with their tails. If the "to hit" roll for the bite is 4 or more than the number required (or a 20, in any case), creatures of man-size or smaller will be swallowed whole, taking 3-18 (3d6) points of damage each round thereafter.

Those stung by the tail must save vs. Poison or die. Note that if encountered underground, the size of underground tunnels may prevent a purple worm from using one or both of its attacks.

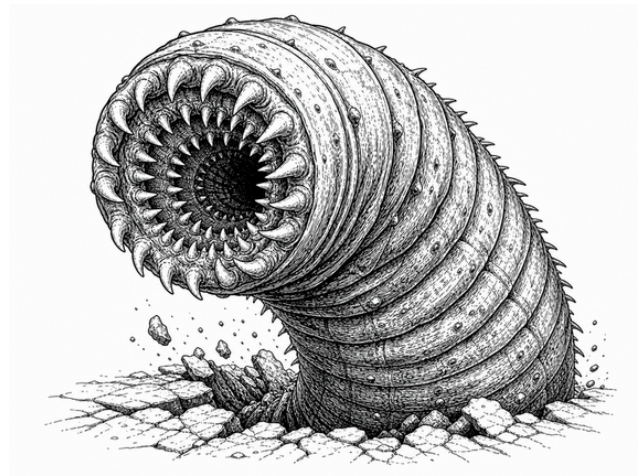

Figure 48: Purple Worm

Roc*Source:* Expert

Stat	Small Roc	Large Roc	Giant Roc
Armor Class	4	2	0
Hit Dice	6	12	36
Move	60' (20')	60' (20')	60' (20')
Flying	480' (160')	480' (160')	480' (160')
Attacks	2 claws / 1 bite	2 claws / 1 bite	2 claws / 1 bite
Damage	2d5 / 2d5 / 2d6	1d8 / 1d8 / 2d10	3d6 / 3d6 / 8d6
No. Appearing	0 (1d12)	0 (1d8)	0 (1)
Save As	Fighter 3	Fighter 6	Fighter 18
Morale	8	9	10
Treasure Type	I	I	I
Alignment	Lawful	Lawful	Lawful

Rocs are huge birds of prey resembling eagles. They are very lawful, and are often unfriendly towards neutrals, -1 on reaction rolls, and chaotics, -2 on reactions. Rocs prefer solitude and will swoop to attack any intruders unless carefully approached.

Roc nests are found in the highest mountains and 50% of the time will contain 1-6 eggs or young. Rocs never check morale if encountered in their lair. If hatched or captured as chicks, young rocs can be trained.

Rust Monster*Source:* Basic

Armor Class	2	No. Appearing	1d4 (1d4)
Hit Dice	5	Save As	Fighter 3
Move	120' (40')	Morale	7
Attacks	1	Treasure Type	Nil
Damage	See below	Alignment	Neutral

A rust monster has a body like a giant armadillo with a long tail, and 2 long front “feelers” (antennae). If a character hits a rust monster, or if a rust monster hits a character with its antenna, it will cause any metal armor or weapons touching it to immediately rust, so that they are unusable and worthless. Each time magical weapons and armor are struck they will lose one plus. Magical weapons and armor have a chance of not being affected. For each “plus” that a weapon or armor has, there is a 10% chance that it will not rust. **EXAMPLE:** A shield + 3 has a 30% chance of surviving the attack or else it is reduced to a shield + 2. A rust monster is attracted by the smell of metal. It eats the rust created by its attacks.

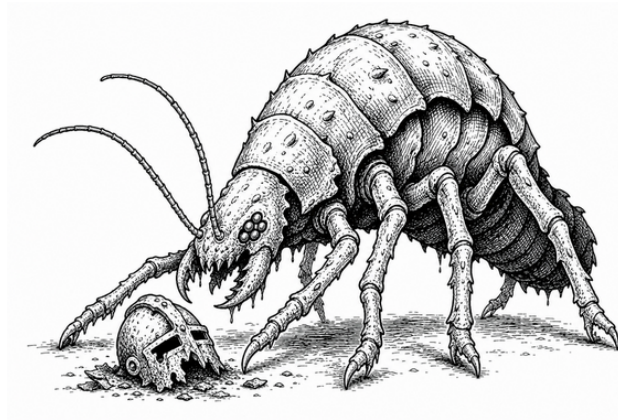

Figure 49: Rust Monster

Sea Serpent (Lesser)

Source: Expert

Armor Class	5	No. Appearing	0 (2d6)
Hit Dice	6	Save As	Fighter 3
Move	150' (50')	Morale	8
Attacks	1 bite or squeeze	Treasure Type	Nil
Damage	2d6	Alignment	Neutral

A sea serpent resembles a long, 20' to 30', giant snake with many fins. A sea serpent may attack a sea craft its own size or smaller by looping around the boat and squeezing for 1-10 points of hull damage per round. Its normal attack is a bite, and it can lunge up to 20' out of the water when biting creatures on the surface.

Figure 50: Sea Serpents

Shadow

Source: Basic

Armor Class	7	No. Appearing	1d8 (1d12)
Hit Dice	2 + 2*	Save As	Fighter 2
Move	90' (30')	Morale	12
Attacks	1	Treasure Type	F
Damage	1d4 + special	Alignment	Chaotic

Shadows are in-corporeal (ghost-like) intelligent creatures. They can only be harmed by magical weapons. They look like real shadows and can alter their shape slightly. Shadows are hard to see and surprise on a 1 to 5 on a d6. If a shadow scores a hit, it will drain 1 point of Strength in addition to doing normal damage (1d4 points). This weakness will last for 8 turns. Any creature whose Strength is reduced to 0 or less will become a shadow. Shadows are not undead, and cannot be “Turned” by clerics. They are not affected by sleep and charm spells. The DM is advised not to use shadows unless the party has at least one magical weapon.

Shrieker

Source: Basic

Armor Class	7	No. Appearing	1d8 (0)
Hit Dice	3	Save As	Fighter 1
Move	9' (3')	Morale	12
Attacks	See below	Treasure Type	Nil
Damage	Nil	Alignment	Neutral

Shriekers look like giant mushrooms. They live in underground caverns and are able to move around slowly. They react to light (within 60') and movement (within 30') by emitting a piercing shriek which lasts for 1-3 rounds. There will be a 50% chance per round of a wandering monster encounter for each round that a shrieker shrieks. The wandering monster will arrive in 2d6 rounds.

Stirge

Source: Basic

Armor Class	7	No. Appearing	1d10 (3d12)
Hit Dice	1*	Save As	Fighter 2
Move	30' (10')	Morale	9
Flying	180' (60')	Treasure Type	L
Attacks	1	Alignment	Neutral
Damage	1d3		

A stirge is a birdlike creature with a long beak, rather like a very small feathered anteater. When it attacks, it tries to bury its beak in the victim and suck blood. A successful hit means it has attached itself, after which it automatically drains 1-3 points each round until either it or its victim dies.

Because of its speed, a flying stirge gains a +2 bonus on its first attack roll against a target. Stirges are hardy and save as Fighter: 2.

Termite, Water

Source: Expert

Stat	Swamp Termite	Fresh Water Termite	Salt Water Termite
Armor Class	4	6	5
Hit Dice	1 + 1	2 + 1	4
Move	90' (30')	120' (40')	180' (60')
Attacks	See below	See below	See below
Damage	1d3	1d4	1d6
No. Appearing	0 (1d4)	0 (1d3)	0 (2d6+1)
Save As	Fighter 1	Fighter 2	Fighter 3
Morale	10	8	11
Treasure Type	Nil	Nil	Nil
Alignment	Neutral	Neutral	Neutral

Water termites vary from about 1' to 5' in length, the largest being found in ocean waters. All are shaped similar to normal termites except for an elastic body sack which can intake and expel water.

When the body sack is completely expanded, the water termite looks like a large balloon with a small insect-like head attached at the front of the body. These termites jet about underwater like squids. When frightened above water, the water termite will release an irritating spray at one target. Any creature or character hit by this spray must save vs. Poison or be stunned for 1 turn. If frightened underwater, it will produce a black ink to obscure the vision of its attacker. These defense mechanisms can be used once per turn. If backed into a corner, the water termite will attempt to bite its attacker.

The real terror of these creatures is the possible destruction they can cause to boats and ships.

Water termites will cling to passing vessels and move about the bottom to find a good place to begin eating away at the wood. Once attached, each termite will do 1-3 points of hull damage to the ship or boat and then will drop off, having eaten its fill. Check for sinking (see page) after the water termites have begun to damage the vessel. Once a water termite damages a boat or ship, there is a 50% chance each round that someone will notice water leaking into the vessel.

Figure 51: Termite

Thoul

Source: Basic

Armor Class	6	No. Appearing	1d6 (1d10)
Hit Dice	3**	Save As	Fighter 3
Move	120' (40')	Morale	10
Attacks	2 claws or 1 weapon	Treasure Type	C
Damage	1d3 / 1d3 or weapon	Alignment	Chaotic

A thoul is a magical combination of a ghoul, a hobgoblin, and a troll (see D&D EXPERT rules). Except when very close, thouls look exactly like hobgoblins, and they are sometimes found as part of the bodyguard of a hobgoblin king. The touch of a thoul will paralyze in the same way as that of a ghoul.

If it is damaged, a thoul will regenerate 1 hit point per round as long as it is alive. After a thoul is hit, the DM should add 1 hit point to its total at the beginning of each round of combat.

Yellow Mold

Source: Basic

Armor Class	Can always be hit	No. Appearing	1d8 (1d4)
Hit Dice	2	Save As	Fighter 2
Move	0	Morale	Not applicable
Attacks	Spores	Treasure Type	Nil
Damage	1d6 + special	Alignment	Neutral

This deadly fungus covers an area of 10 square feet (2' by 5', for example), though many are some-

times found together. Yellow mold can only be killed by fire; a torch will do 1d4 points of damage to it each round. It will eat through wood and leather but does not harm metal or stone.

It does not actually attack, but if it is touched

by a torch, for example, the touch may cause the mold to squirt out a 10'x10'x10' cloud of spores. There is a 50% chance per hit that the mold will squirt out this cloud. Anyone caught within the cloud must save vs. Death Ray or choke to death within 6 rounds.

NPCs

Non-player characters (NPCs) include adventurers, townsfolk, mercenaries, cultists, bandits, and other intelligent beings encountered during play. Some may become allies, hirelings, rivals, patrons, or enemies depending on the actions of the players.

Most NPCs are ordinary people, but experienced warriors, priests, rogues, and spellcasters may also be encountered. NPCs should be given individual motives, personalities, and loyalties by the DM, as even minor characters can become important parts of a campaign.

Acolyte

Source: Basic

Armor Class	6	No. Appearing	1d8 (1d20)
Hit Dice	1	Save As	Cleric 1
Move	90' (30')	Morale	8
Attacks	1 weapon	Treasure Type	U
Damage	by weapon	Alignment	Any

Acolytes are 1st level NPC clerics on a pilgrimage to or from a holy (or unholy) shrine — or perhaps merely seeking adventure. All of the clerics in the party will be of the same alignment, but the entire party has an equal chance to be Lawful, Neutral, or Chaotic. The acolytes do not know any spells.

If 4 or more acolytes are encountered, they are led by a higher-level cleric:

Roll (1d10)	Leader's Level
1-4	2nd
5-7	3rd
8-9	4th
10	5th

Bandit

Source: Basic

Armor Class	6	No. Appearing	1d8 (3d10)
Hit Dice	1	Save As	Thief 1
Move	120' (40')	Morale	6
Attacks	1 weapon	Treasure Type	U (A)
Damage	1d6	Alignment	Non-lawful

Bandits are NPC thieves who have joined together for the purpose of robbing others. Bandits will act as normal humans in order to surprise their intended victims. Treasure Type (A) is only found when bandits are encountered in the wilderness in their lair.

Bandits may have an NPC leader of any class, usually a fighter, magic-user, or thief, of a higher

level than the bandits. (Roll as for Acolyte)

Figure 52: Bandit

Berserker

Source: Basic

Armor Class	7	No. Appearing	1d6 (3d10)
Hit Dice	1 + 1*	Save As	Fighter 1
Move	120' (40')	Morale	See below
Attacks	1 weapon	Treasure Type	P (B)
Damage	by weapon	Alignment	Neutral

Berserkers are fighters driven mad by battle fury. Their reactions are determined normally, but once combat begins they will fight to the death, sometimes even attacking their own comrades in blind rage.

Berserkers care little for strategy, discipline, or self-preservation once blood has been spilled. Many are feared raiders, cult warriors, or savage mercenaries who value ferocity above all else.

When fighting humans or human-like creatures such as kobolds, goblins, or orcs, berserkers gain a +2 bonus on attack rolls due to their ferocity. They never retreat, surrender, or take prisoners.

Treasure Type (B) is only found in the wilderness.

If 4 or more berserkers are encountered, they are led by a higher-level fighter. (Roll as for Acolyte)

Dwarf

Source: Basic

Armor Class	4	No. Appearing	1d6 (5d8)
Hit Dice	1	Save As	Dwarf 1
Move	60' (20')	Morale	8 or see below
Attacks	1 weapon	Treasure Type	G
Damage	by weapon	Alignment	non-chaotic

Dwarves can also appear as NPCs, usually in clan groups or as war or mining expeditions. For every 20 dwarves there will be one leader (level 3-8: 1d6 + 2) and who may have magical items. To check for possible magical items, multiply the leader's level by 5.

The result is the percentage chance for that leader to own a magical item from any one particular subtable. Roll separately for each type (subtable) of magic treasure. Check all the subtables except the Scroll subtable and the Wand/Rod/Staff subtable.

As long as their leader is fighting with them and still alive, dwarven morale is 10 rather than 8. Dwarves hate goblins, and will usually attack them on sight.

Figure 53: Dwarf

Elf

Source: Basic

Armor Class	5	No. Appearing	1d4 (2d212)
Hit Dice	1 + 1*	Save As	Elf 1
Move	120' (40')	Morale	8 or see below
Attacks	1 weapon	Treasure Type	E
Damage	by weapon	Alignment	non-chaotic

Elves can also appear as NPCs. Each elf will have one 1st level spell (chosen at random). When a group of 15 or more elves appears, one of them will be a leader of level 1d6 + 1. Check for possible magical items that the leader may have. To check for items, multiply the leader's level by 5. The result is the percentage chance for that leader to have a magic item from any one of the magic subtables. Roll separately for each subtable, and check all the magic subtables. As long as their leader is alive, elven morale is 10 rather than 8.

Figure 54: Elf

Gnome

Source: Basic

Armor Class	5	No. Appearing	1d8 (5d8)
Hit Dice	1	Save As	Dwarf 1
Move	60' (20')	Morale	8 or see below
Attacks	1 weapon	Treasure Type	C
Damage	by weapon	Alignment	non-chaotic

Gnomes are a human-like race related to dwarves. They are smaller than dwarves, and

have long noses and full beards.

Gnomes have well developed infravision (heat-sensing sight), and can "see" heat to 90' in the dark. They usually live in burrows in the lowlands. Gnomes are excellent metalsmiths and miners. They love gold and gems and have been known to make bad decisions just to obtain them. They love machinery of all kinds and like to use crossbows as missile weapons and war hammers in hand-to-hand combat. Gnomes like most dwarves, but war with goblins and kobolds who steal their precious gold. They will usually attack kobolds on sight.

For every 20 gnomes, one will be a leader with 11 hit points who fights as a 2 hit dice monster. In the gnome lair lives a clan chieftain and his 1d6 bodyguards. The clan chieftain has 18 hit points, attacks as a 4 hit dice monster, and gains a bonus of + 1 on damage rolls. The bodyguards will have 1d4 + 9 hit points and attack as 3 hit dice. As long as the clan chieftain or leader is alive, all gnomes within sight of him have a morale of 10 rather than 8.

Halfling

Source: Basic

Armor Class	7	No. Appearing	3d6 (5d8)
Hit Dice	1-1	Save As	Halfling 1
Move	90' (30')	Morale	7
Attacks	1 weapon	Treasure Type	V (or B)
Damage	by weapon	Alignment	Lawful

Halflings can also be NPCs. They live in small villages of 30-300 inhabitants. Each village will have a leader (level 2-7) and a village guard of 5-20 militia (each with 2 hit dice). Treasure type (B) will only be found if encountered in the wilderness.

Medium

Source: Basic

Armor Class	9	No. Appearing	1d4 (1d12)
Hit Dice	1*	Save As	Magic-user 1
Move	120' (40')	Morale	7
Attacks	1 dagger or spell	Treasure Type	V
Damage	1d4 or by spell	Alignment	Any

Mediums are NPC 1st level magic-users. There is a 50% chance that mediums will be accompanied by their master, a 3rd level magic-user. Mediums will each have one 1st level spell which the DM may choose or determine randomly.

The 3rd level magic-user will have two 1st level spells and one 2nd level spell, chosen in a similar manner.

Men

Source: Expert

No. Appearing	0 (10d4)	0 (special)	0 (5d10+20)	0 (1d20)	0 (10d4)
Save As	Fighter 1	Fighter 1	Fighter 1	Fighter 1	Fighter 1
Morale	8	6 (7)	10	Variable	8
Treasure Type	A	A	A	A	A
Alignment	Chaotic	Neutral / chaotic	Lawful	Neutral	Neutral

Most groups of men will be led by additional higher-level leaders with better armor, hit points, saving throws, and possibly magic items. Men also usually have large camps, and the treasure will usually be at the camp.

Brigands are loosely organized outlaws and renegade mercenaries who live by raiding towns and robbing caravans and travelers. For every 20

brigands there will be an additional 2nd level fighter who acts as their leader. For every 40 brigands there will be an additional 4th level fighter acting as commander of the entire group.

Half the brigands will have leather armor, shield, short bow, and sword. The rest will be mounted on riding horses, wear chain mail and shield, and carry swords. The leaders will wear plate

mail, carry swords and lances, and ride barded war horses. Brigands will often band together to make fortified camps of 50-300 men. A camp will always be led by a 9th level fighter, with an additional 5th level fighter for every 50 brigands. There is also a 50% chance that a magic-user of 9th to 11th level will be in the brigand camp, and a 30% chance for a cleric of 8th level.

Buccaneers are found on seas, rivers, great lakes, and occasionally oceans. They live by raiding coastal towns and capturing ships to sell the booty elsewhere. Pirates are seagoing men who plunder other vessels, raid coastal towns, and engage in illegal slave trades. They are noted for evil acts and cruelty toward prisoners, and will also freely attack each other if there is a chance for profit. The number of buccaneers or pirates that appear depends on the type and number of ships they are sailing.

Buccaneers and pirates are organized as follows. Leather armor and sword: buccaneers 60%, pirates 50%. Leather armor, sword, and crossbow: buccaneers 30%, pirates 35%. Chain mail and sword: buccaneers 10%, pirates 15%; buccaneers of this type also carry crossbows. For every 30 buccaneers there will be a 4th level fighter. For every ship, there will be a 7th level fighter as captain, and there will be a 9th level fighter as commander of the fleet. There is a 30% chance that a 10th or 11th level magic-user and a 25% chance that an 8th level cleric will be with the fleet.

For every 30 pirates, they will be led by a 4th level fighter. For every 50 pirates or ship, there will be a 5th level fighter. For every 100 pirates or fleet, there will be an 8th level fighter as leader. For every fleet of 300 or more pirates, there will be an 11th level fighter, the pirate lord, as commander of the fleet, and a 75% chance for a 9th or 10th level magic-user. Buccaneers and pirates may carry their treasure with them or have maps showing where it is buried. The treasure given is the total for the entire buccaneer pack or pirate fleet and may be divided as the DM desires. In addition, pirates have a 25% chance of having 1-3 prisoners with them, awaiting ransom. Often, well-defended coastal towns will serve as havens for pirates and buccaneers. These are lawless and dangerous places, full of many possible adventures.

Dervishes often form into camps or tribes of up to 300 men, led by a 10th level cleric. Such a camp will be of tents, 75%, or a wooden or brick stockade, 25%. These camps will contain women, chil-

dren, livestock, and the treasure of the dervishes.

Dervishes are noted for their fanatic belief in their religion and their intolerance of other views. On rare occasions, they will wage a holy war, in which they will attempt to capture or kill all who have different beliefs. Captives will be given an opportunity to convert; if they refuse, they may be killed or enslaved. Lawful characters may be invited to join the crusade, and those who refuse will be viewed with great suspicion unless a good reason can be provided as to why they should not participate.

Merchants are traders who travel in caravans from town to town, selling and buying various goods such as wines, silks, jewels, and precious metals. Those in the caravan usually ride horses, but they are likely to travel by camel in desert and barren lands and by mule in the mountains. All merchants wear chain mail and carry a sword and dagger.

Typical caravan organization is 5 wagons with 10 merchants, 20 1st level fighters, 2 2nd or 3rd level fighters, 1 5th level fighter, and 1-12 extra animals. At 10 wagons, 20 merchants, 40 1st level fighters, 4 2nd or 3rd level fighters, 1 5th level fighter, and 1-12 extra animals. At 15 wagons, 30 merchants, 60 1st level fighters, 6 2nd or 3rd level fighters, 1 5th level fighter, and 1-12 extra animals. At 20 wagons, 40 merchants, 80 1st level fighters, 8 2nd or 3rd level fighters, 1 5th level fighter, and 1-12 extra animals. All fighters have Armor Class 4 and carry swords, daggers, and crossbows. The extra animals may be horses, mules, or even camels, at the DM's choice. If a caravan has fewer than 20 wagons, the treasure should be reduced accordingly.

Nomads are groups of wandering tribesmen who may be peaceful or warlike and may have any alignment. Small bands encountered hunting or foraging in the wilderness will usually be part of a larger tribe. All treasure will be at the main camp.

Attacks	1 weapon	Treasure Type	V x 3
Damage	1d8 or weapon	Alignment	Any

"Noble" is a general term for the lord of a castle and any of his or her relatives. In the D&D BA-

SIC rules, a noble will always be a 3rd level fighter. However, the DM may choose to make a noble any class and level. The DM may make up the noble's title or use traditional ones; a few sample titles are Baron or Baroness, Count or Countess, Duke or Duchess, Emir, Khan, Knight, Margrave, and Sheikh.

A little research will uncover many more traditional titles. A noble will always be accompanied by a squire, a 2nd level fighter. A noble might also be accompanied by as many as 10 retainers or hirelings, usually 1st level fighters. For details on encounters with nobles in their castles, see the D&D EXPERT rules.

Normal Human

Source: Basic

Armor Class	9	No. Appearing	1d4 (1d20)
Hit Dice	1d4 hit points	Save As	Normal Human
Move	120' (40')	Morale	6
Attacks	1 weapon	Treasure Type	U
Damage	by weapon	Alignment	Any

A normal human is a human who does not seek dangerous adventure. A normal human does not have a class. Normal humans have their own saving throws and "to hit" numbers. They have from 1 to 4 hit points (depending on their age, health, and profession). **EXAMPLE:** An adult blacksmith would have 4 hp, but a young child or sickly beggar would have 1 hp.

Most humans are "normal" humans, though people with certain professions (such as merchant, soldier, lord, scout, and so forth) help in some adventures. As soon as a human gets experience points through an adventure, that person must choose a character class. Some type of normal humans are: peasants, children, housewives, workers, artists, villagers, townspeople, slaves, fishermen, and scholars.

NPC Parties

Source: Expert

Adventuring Parties These rules generate random groups of NPC adventurers. Because the procedure can involve several rolls, referees may wish to pre-generate a few parties for use during play.

The following details apply to all NPC parties unless noted otherwise:

- **Spells:** Spell casters should have memorized spells selected or rolled in advance.
- **Equipment:** Standard adventuring gear.
- **Treasure:** Treasure types U + V, divided among the party.
- **Marching Order:** Determined by the referee.

If the character classes presented in this book are not used in the campaign, substitute equivalent classes.

Basic Adventurers A small, low-level adventuring group.

- **Composition:** 1d4+4 characters of random class and level.
- **Alignment:*** Roll once for the whole party or individually for each NPC.

Expert Adventurers An experienced and better-equipped adventuring party.

- **Composition:** 1d6+3 characters of random class and level.
- **Alignment:** Roll once for the whole party or individually for each NPC.
- **Mounts:** In the wilderness, there is a 75% chance the party is mounted.
- **Magic Items:** Each NPC has a 5% per level chance of possessing one magic item from each appropriate magic item sub-table. Ignore unusable results; do not re-roll.

High-Level Cleric A powerful cleric travelling with loyal followers.

- **Leader:** Cleric of level 1d6+6
- **Followers:** 1d4 clerics of level 1d4+1
- **Retainers:** 1d3 fighters of level 1d6
- **Alignment:** Roll once for the whole party.

Mounts and magic items are determined as for Expert Adventurers.

High-Level Fighter A renowned warrior accompanied by retainers, often travelling to or from battle.

- **Leader:** Fighter of level 1d4+6
- ***Retainers**:** 2d4 retainers of level 1d4+2 (any class)
- **Alignment:** Roll once for the whole party.

Mounts and magic items are determined as for Expert Adventurers.

High-Level Magic-User A powerful magic-user accompanied by apprentices and hired guards, often seeking forgotten lore.

- *Leader*: Magic-user of level 1d4+6
- **Apprentices**: 1d4 magic-users of level 1d3
- *Mercenaries*: 1d4 fighters of level 1d4+1
- *Alignment*: The apprentices share the leader's alignment. Mercenaries may be of any alignment.

Mounts and magic items are determined as for Expert Adventurers.

NPC Adventurer Class and Level

d8	Class	Basic	Expert
1	Cleric	1d3	1d6+3
2	Dwarf	1d3	1d6+6
3	Elf	1d3	1d6+2
4	Fighter	1d3	1d6+3
5	Fighter	1d3	1d6+5
6	Halfling	1d3	1d6+2
7	Magic-User	1d3	1d6+3
8	Thief	1d3	1d6+4

NPC Adventurer Alignment

d6	Alignment
1-2	Lawful
3-4	Neutral
5-6	Chaotic

Trader

Source: Basic

Armor Class	6	No. Appearing	1d8 (3d6)
Hit Dice	1	Save As	Fighter 1
Move	120' (40')	Morale	7
Attacks	1 weapon	Treasure Type	U + V
Damage	by weapon	Alignment	Any

Traders are first level fighters who make their living trading goods. They are similar to merchants, but much braver and much better fighters. They usually carry swords and hand axes. They wear furs, treating them as leather armor, and carry shields.

When encountered in the wilderness, they will be leading 1-4 pack mules carrying trade goods. The choice of exactly which trade goods is left to the DM; typical ones are spices, furs, or carved decorative items.

Veteran

Source: Basic

Armor Class	2	No. Appearing	2d4 (2d6)
Hit Dice	1d3	Save As	Fighter 1-3
Move	60' (20')	Morale	9 (varies)
Attacks	1 weapon	Treasure Type	V
Damage	by weapon	Alignment	Any

Veterans are low-level fighters, usually returning from or going to a war. To determine each veteran's level and alignment, use the method outlined under Creating an NPC Party. A party of veterans may be of mixed levels and alignments, or the DM may wish to give all members the same levels.

Sylvan or Faerie Creatures

Sylvan or faerie creatures are encountered in magical woodlands, sometimes sharing their territory with elves. As a group they are reclusive and, with some notable exceptions, generally good aligned.

Their homes are places of uncanny beauty filled with lush growth, flowering glades, sparkling waterfalls, and clear woodland pools. These creatures are often highly magical and possess a mischievous sense of humor, making encounters with them unpredictable and dangerous as often as they are wondrous.

Centaur

Source: Expert

Armor Class	5	No. Appearing	0 (2d10)
Hit Dice	4	Save As	Fighter 4
Move	180' (60')	Morale	8
Attacks	2 hooves / 1 weapon	Treasure Type	A
Damage	1d6x2/ by weapon	Alignment	Neutral

A centaur has the head, arms, and upper body of a human joined to the body and legs of a powerful horse. Proud and wary creatures, centaurs prefer the deep forests and open meadows far from the settlements of humankind. They are intelligent enough to craft and use weapons such as clubs, lances, bows, and spears.

Centaur usually live in small tribes or extended family bands. Their hidden camps are often concealed within dense woods or thorny thickets, reached only by twisting, carefully guarded trails. Females and young generally remain within the lair while the warriors patrol and hunt.

If threatened, the females and young will attempt to flee unless escape is impossible, in which case they will fight fiercely to the death. Young centaurs fight as 2 hit dice monsters, attacking with small weapons or with hooves for 1-2 / 1-2 / 1-4 damage.

Figure 55: Expert monster illustration: centaur

Dryad

Source: Expert

Armor Class	5	No. Appearing	0 (1d6)
Hit Dice	2*	Save As	Fighter 4
Movement	120' (40')	Morale	6
Attacks	See below	Treasure Type	D
Damage	0	Alignment	Neutral

A dryad is a beautiful female tree spirit who lives in a woodland setting or dense forest. Each individual dryad always lives in a specific tree and will die in one turn if taken more than 240' away from it. A dryad will also die if her tree dies. If a dryad wishes to be unobserved, she will join with her tree, becoming part of it. Dryads are extremely shy and non-violent, but very suspicious of strangers.

Anyone approaching or following a dryad, not merely standing in the area of the tree, may be attacked by the powerful charm person spell these creatures can cast. The victim must make a saving throw vs. Spells with a penalty of -2 on the roll. A charmed character will approach the tree and be drawn into it. Unless rescued immediately, the victim will never be seen again.

Dryads hide their treasure in hollows under the roots of their trees.

Figure 56: Dryad

Nixies

Source: Expert

Armor Class	7	No. Appearing	0 (2d10)
Hit Dice	1	Save As	Elf 1
Move	120' (40')	Morale	6
Attacks	1	Treasure Type	B
Damage	1d4	Alignment	Neutral

Nixies are 3' tall water sprites. They look like small beautiful women, and their skin is light blue, green, or gray-green. They avoid combat, but may try to charm an adventurer. Ten nixies can cast one such charm, and if a save vs. Spells is not made, the victim will enter the water and serve the nixies for a year. (Each nixie can cast a water breathing spell on her slave, but this must be renewed every day.) If forced to fight, nixies use small tridents (treat as spears) and daggers, and each will summon a giant bass to aid them (AC 7, HD 2, MV 120' (40'), #AT 1, D 1-6, Save Fl, ML 8, AL N).

Nixies dwell in rivers and lakes, making their lairs in the deepest part of the water.

Pixie

Source: Basic

Armor Class	3	No. Appearing	2d4 (10d4)
Hit Dice	1*	Save As	Elf 1
Move	90' (30')	Morale	7
Flying	180' (60')	Treasure Type	R + S
Attacks	1 dagger	Alignment	Neutral
Damage	1d4		

Pixies are small (1-2' tall) human-like creatures with insect-like wings distantly related to elves. They are invisible unless they want to be seen (or

unless a detect invisible spell is used when they are nearby). Unlike the effects of the invisibility spell, pixies can attack and remain invisible, and they always gain surprise when doing so. They may not be attacked in the first round of combat, but after that their attackers will see shadows and movement in the air and may attack the pixies with a -2 penalty on "to hit" rolls.

Their small insect-like wings can only support pixies for 3 turns, and they must rest one full turn after flying.

Figure 57: Pixies

Sprite

Source: Basic

Armor Class	5	No. Appearing	3d6 (5d8)
Hit Dice	1/2* (1d4 hp)	Save As	Elf 1
Move	60' (20')	Morale	7
Flying	180' (60')	Treasure Type	S
Attacks	1 spell	Alignment	Neutral
Damage	See below		

Sprites are small winged people about 1 foot tall related to pixies and elves. While shy, they are very curious and have a strange sense of humor. Five sprites acting together can cast one curse spell. This will take the form of a magical practical joke, such as tripping or having one's nose grow. The exact effect of the spell is up to the DM's imagination. Sprites will never cause death on purpose even if they are attacked. (In the D&D EXPERT rules, the effects of the sprites' curse can be removed by a remove curse spell.)

Treant

Source: Expert

Armor Class	2	No. Appearing	0 (1d8)
Hit Dice	8	Save As	Fighter 8
Move	60' (20')	Morale	9
Attacks	2 blows	Treasure Type	C
Damage	2d6 / 2d6	Alignment	Lawful

Treants are 18' tall tree-men who resemble trees. Treants are only concerned with protecting forests and plant life. They speak a slow and

difficult tongue and distrust those who use fire. Because treants are often mistaken for normal trees, all encounters with treants take place at 30 yards or less and they surprise a party on a roll of 1-3.

One treant can animate any two trees within 60' to move at 30', 5', and fight as treants. A treant may change which trees it is animating at will.

Figure 58: Treant

Unicorn

Source: Expert

Armor Class	2	No. Appearing	1d6 (1d8)
Hit Dice	4*	Save As	Fighter 8
Move	240' (80')	Morale	7
Attacks	2 hooves / 1 horn	Treasure Type	Nil
Damage	1d8 each	Alignment	Lawful

A unicorn looks like a slender horse with a horn growing from its forehead. A unicorn is a fierce but shy creature. Only a pure maiden can talk to or ride one. It can magically teleport itself with a rider to a distance of 360' once per day.

Figure 59: Unicorn

Undead

Undead are evil creatures created through dark magic. They are unaffected by things that affect living creatures, such as poison, and are not affected by spells which influence the mind, such as sleep and charm person. They do not make noise.

Ghoul

Source: Basic

Armor Class	6	No. Appearing	1d6 (2d8)
Hit Dice	2*	Save As	Fighter 2
Move	90' (30')	Morale	9
Attacks	2 claws/1 bite	Treasure Type	B
Damage	1d3x3 + special	Alignment	Chaotic

Ghouls are undead creatures. They are hideous, beast-like humans who will attack anything living. Any attack by a ghoule will paralyze any creature of ogre-size or smaller that they hit successfully (except elves) unless the victim saves vs. Paralysis. Once an opponent is paralyzed, the ghoule will turn and attack another opponent, until either the ghoule or all the opponents are paralyzed or dead. This paralysis is the normal type (lasting 2-8 turns unless removed by a **cure light wounds spell**).

Mummy*

Source: Expert

Armor Class	3	No. Appearing	1d4 (1d12)
Hit Dice	5 + 1*	Save As	Fighter 5
Move	60' (20')	Morale	12
Attacks	1 touch + disease	Treasure Type	D
Damage	1d12 + disease	Alignment	Chaotic

Mummies are undead who lurk near deserted ruins and tombs. On seeing a mummy, each character must save vs. Paralysis or be paralyzed with fear until the mummy attacks someone or goes out of sight.

In melee, a hit by a mummy does 1d12 points of damage and infects the creature hit with a hideous rotting disease. This disease prevents magical healing and makes all wounds take 10 times as long to heal. The disease lasts until it is magically cured.

Mummies can only be damaged by spells, fire, or magic weapons, all of which will only do half damage. They are immune to **sleep**, **charm**, and **hold** spells.

Skeleton

Source: Basic

Armor Class	7	No. Appearing	3d4 (3d10)
Hit Dice	1	Save As	Fighter: 1
Move	60' (20')	Morale	12
Attacks	1	Treasure Type	Nil
Damage	by weapon	Alignment	Chaotic

Animated skeletons are undead creatures often found near graveyards, dungeons, or other deserted places. They are used as guards by the high level magic-user or cleric who animated them.

Since they are undead, they can be "Turned" by a cleric, and are not affected by sleep or charm spells, nor any form of mind reading. Skeletons will always fight until killed.

Skeleton

Figure 60: Skeleton

Spectre*

Source: Expert

Armor Class	2	No. Appearing	1d4 (1d8)
Hit Dice	6**	Save As	Fighter 6
Move	150' (50')	Morale	11
Flying	300' (100')	Treasure Type	E
Attacks	1 touch + special	Alignment	Chaotic
Damage	1d8 + 2 level drain		

The ghostly spectres are among the mightiest of the undead. They have no solid bodies and can only be hit by magic weapons; silver weapons have no effect. Like all undead, spectres are immune to sleep, charm, and hold spells.

A hit by a spectre does 1d8 points of damage and drains 2 life energy levels. The result of this drain is that the creature touched loses 2 hit dice, levels of experience. Experience points will drop to the lowest amount needed for the new level, and all hit dice and abilities associated with the drained levels are lost.

A character whose level is reduced to 0 is slain. A character slain by a spectre will rise the next night as a spectre under the control of the slayer.

Figure 61: Expert monster plate: spectre

Vampire*

Source: Expert

Armor Class	2	No. Appearing	1d4 (1d6)
Hit Dice	7-9**	Save As	Fighter 7-9
Move	120' (40')	Morale	11
Flying	180' (60')	Treasure Type	F
Attacks	1 touch + special	Alignment	Chaotic
Damage	1d10 + energy drain		

Vampires are the most feared of the undead, feeding on the blood of the living in order to survive. Vampires haunt ruins, tombs, crypts, and other places deserted by man. They are unaffected by sleep, charm, and hold spells. Vampires can only be hit with magic weapons.

In human form, a vampire's touch will drain 2 life energy levels from the victim. A character slain by a vampire will return from death as a vampire in 3 days.

A vampire may also attempt to charm any who gaze into its eyes. The victim must save vs. Spells to avoid the charm, with a -2 penalty on the roll. A charmed victim will be totally under the vampire's control, but cannot use spells or magic.

A vampire in any form can regenerate 3 hit points per round, as soon as it is damaged. If a vampire is reduced to 0 hit points, it will not regenerate, but will become gaseous and flee to its coffin.

In human form the vampire can summon 10-100 rats, 5-20 giant rats, 10-100 bats, 3-18 giant bats, or 3-18 wolves, 2-8 dire wolves, if these are in the area.

Weaknesses of vampires: Vampires will not come within 10' of any strongly presented holy symbol, although they may move to attack the person holding the symbol from another direction. A strong odor of garlic repels them, save vs. Poison or cannot attack that round. Vampires cast

no reflection and avoid mirrors.

A vampire may take the form of a human, a dire wolf, a giant bat, or a gaseous cloud at will. This transformation requires 1 round. In dire wolf or giant bat form, the vampire will move, attack, and do damage according to the statistics for those creatures. The vampire's armor class, hit dice, morale, and saving throws remain unchanged. In gaseous form, a vampire can fly at the listed speed and has immunity to all weapon attacks. A vampire cannot attack while in gaseous form.

Vampires cannot cross running water, either on foot or flying, except at bridges or while in their coffins. During the day, a vampire usually rests in its coffin, and failure to do so results in the loss of 2d6 hit points per day. These hit points will not be regenerated until the vampire has rested in its coffin for a full day.

Destroying vampires: A vampire can be destroyed by driving a wooden stake through its heart or by immersion in running water for 1 turn. If a vampire is exposed to direct sunlight, the creature must make a saving throw vs. Death Ray each round or disintegrate. A continual light spell will not disintegrate a vampire, but will partially blind it, making its attacks suffer a -4 penalty to hit. If all of the vampire's coffins are blessed or destroyed, the vampire will weaken, taking damage as above, and will die when its hit points are reduced to 0. A vampire will always have several well-hidden coffins available.

Figure 62: Vampire

Wight**Source: Basic*

Armor Class	5	No. Appearing	1d6 (1d8)
Hit Dice	3*	Save As	Fighter 3
Move	90' (30')	Morale	12
Attacks	1	Treasure Type	B
Damage	Energy drain	Alignment	Chaotic

A wight is an undead spirit living in the body of a dead human or demi-human. It can only be hit by silvered or magical weapons. Wights are greatly feared, as they drain life energy when striking a victim. Each hit drains one level of experience or hit die. Example: a 3rd level fighter struck by a wight becomes a 2nd level fighter, keeping only enough experience points to be at the midpoint of 2nd level, and losing 1 hit die of hit points.

Any person totally drained of life energy by a wight will become a wight in 1-4 days and will be under control of the wight who drained them.

Wraith**Source: Expert*

Armor Class	3	No. Appearing	1d4 (1d6)
Hit Dice	4**	Save As	Fighter 4
Move	120' (40')	Morale	12
Flying	240' (80')	Treasure Type	E
Attacks	1 touch + special	Alignment	Chaotic
Damage	1d6 + energy drain		

A wraith is an undead monster that drains the

life force of its victims. It has no physical body and looks like a pale, manlike, almost transparent figure composed of thick mist. It is immune to sleep, charm, and hold spells. A wraith can only be hit by silver or magical weapons, but silver weapons will only do half damage.

When a wraith hits in melee, it will do normal damage and also drain one life energy level, see spectre. Wraiths dwell in deserted lands or in the dwellings of creatures they have slain or frightened away. Characters slain by a wraith will become wraiths under the control of the one that killed them after one day.

Zombie*Source: Basic*

Armor Class	8	No. Appearing	2d4 (4d6)
Hit Dice	2	Save As	Fighter 1
Move	120' (40')	Morale	12
Attacks	1 weapon	Treasure Type	Nil
Damage	by weapon	Alignment	Chaotic

Zombies are undead humans or demi-humans animated by some evil cleric or magic-user. As all undead, they may be turned by a cleric but are not affected by **sleep** or **charm spells** or any form of mind reading. They are often placed to guard treasures, since they make no noise until they attack.

Zombies will always attack on sight, but can be destroyed by normal weapons. They are slow fighters and always strike last (no initiative roll needed).
